

How to void a phase Anti-intervention effects with clitic doubling in Dutch dialects

Jeroen van Craenenbroeck Marjo van Koppen
 CRISSP/Brussels/KUL & Uil-OTS/Utrecht
 jeroen.vancraenenbroeck@hubrussel.be j.m.vankoppen@uu.nl

MAIN THEORETICAL CLAIMS

- Phases are not absolute (“once a phase always a phase”)
- The phasehood of Fin° can be voided if it acquires unvalued features during the derivation

CENTRAL DATA

- Subject clitic doubling with coordinations in Dutch dialects
- Anti-intervention effects with object clitics

OUTLINE OF THE TALK

1. Data
2. Theoretical background: two types of doubling
 - 2.1. A classification of dialect Dutch subject pronouns
 - 2.2. Doubling as movement: the big-DP analysis
 - 2.3. Doubling as agreement: doubling with coordinated subjects
3. Analysis
 - 3.1. Core of the analysis
 - 3.2. Doubling via agreement: anti-intervention
 - 3.3. Doubling via movement: no anti-intervention
4. Comp-agreement vs. clitic doubling
5. Conclusion

1. DATA

Basic pattern of subject clitic doubling:

(1)	$\left\{ \begin{array}{l} \text{complementizer} \\ \text{finite verb} \end{array} \right\}$	subject ₁	subject ₂	...
		clitic	✓strong pronoun	*coordination
			*DP	

strong pronoun

- (2) da se zaai ic gisteren niet geweest is.
 that she_{clitic} she_{strong} here yesterday not been is
 ‘that she wasn’t here yesterday’

[Wambeck Dutch]

coordination (I): pronoun & pronoun

- (3) * da ze [aai en zaai] da suimen wel kunn oplossen.
 that they_{clitic} he_{strong} and she_{strong} that together PRT can out.come
 INTENDED: ‘that he and she can solve that together.’

[Wambeck Dutch]

coordination (II): DP & pronoun

- (4) * da ze [den burremiester en aai] da suimen gonj duun.
 that they_{clitic} the mayor and he that together will do
 INTENDED: ‘that the mayor and he will do that together.’

[Wambeck Dutch]

coordination (III): pronoun & DP

- (5) * da ze [aai en den burremiester] da suimen gonj duun.
 that they_{clitic} he and the mayor that together will do
 INTENDED: ‘that he and the mayor will do that together.’

[Wambeck Dutch]

coordination (IV): DP & DP

- (6) * da ze [den burremiester en de pastoer] da suimen gonj duun.
 that they_{clitic} the mayor and the priest that together will do
 INTENDED: ‘that the mayor and the priest will do that together.’

[Wambeck Dutch]

DP

- (7) * da ze de kinnerjn da suimen gonj duun.
 that they_{clitic} the children that together will do
 INTENDED: ‘that the children will do that together.’

[Wambeck Dutch]

Anti-intervention with object clitics:

(8)	$\left\{ \begin{array}{l} \text{complementizer} \\ \text{finite verb} \end{array} \right\}$	subject ₁	object	subject ₂	...
		clitic	clitic	✓strong pronoun	✓coordination with a pronominal conjunct
				*coordination w/o a pronominal conjunct	*DP

strong pronoun

- (9) da se t zaai nie geduin eit.
 that she_{clitic} it_{clitic} she_{strong} not done has
 ‘that she hasn’t done it.’

[Wambeck Dutch]

coordination (I): pronoun & pronoun

- (10) da ze t [aai en zaai] suimen wel kunn oplossen.
 that they_{clitic} it_{clitic} he_{strong} and she_{strong} together PRT can out.come
 ‘that he and she can solve it together.’

[Wambeck Dutch]

coordination (II): DP & pronoun

- (11) da ze t [den burremiester en aai] suimen gonj duun.
 that they_{clitic} it_{clitic} the mayor and he together will do
 ‘that the mayor and he will do it together.’

[Wambeck Dutch]

coordination (III): pronoun & DP

(12) da ze t [aai en den buremiester] suimen gonj duun.
that they_{clitic} it_{clitic} he and the mayor together will do
'that he and the mayor will do it together.'
[Wambeek Dutch]

coordination (IV): DP & DP

(13) *da ze t [den buremiester en de pastoer] suimen gonj duun.
that they_{clitic} it_{clitic} the mayor and the priest together will do
INTENDED: 'that the mayor and the priest will do it together.'
[Wambeek Dutch]

DP

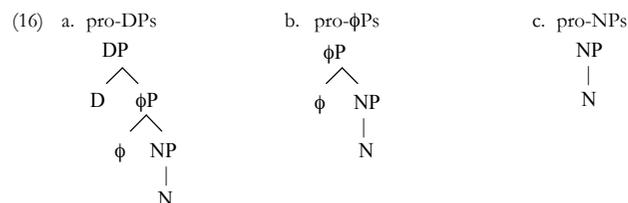

(14) *da ze t de kinnerjn suimen gonj duun.
that they_{clitic} it_{clitic} the children together will do
INTENDED: 'that the children will do that together.'
[Wambeek Dutch]

(15) Type of subject DP	no object clitic	object clitic
pronoun	✓	✓
coordination with a pronominal conjunct	*	✓
coordination with no pronominal conjunct	*	*
non-pronominal DP	*	*

2 THEORETICAL BACKGROUND: TWO TYPES OF DOUBLING

2.1 A classification of dialect Dutch subject pronouns

Déchaine & Wiltschko (2002): a three-way split in the typology of pronouns:

Tests to determine the categorial status of a pronoun:

test		pro-DP	pro-φP	pro-NP
1	Condition C	+	-	-
2	Bound variable			
a	simple QP	-	+	-
b	sloppy identity under ellipsis	-	+	-
3	argument	+	+	-

Van Craenenbroeck & Van Koppen (2008): based on these (and similar) tests it can be shown that while subject clitics in Dutch dialects are φPs, strong and clitic doubled pronouns are DPs:

(17) subject	clitic	φP
	strong	DP
	clitic doubled	DP

example: sloppy identity under ellipsis

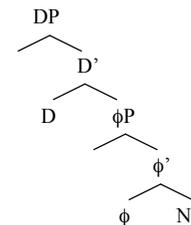

- (18) Jef paust dat n gui winnen, en Piet oek.
Jef thinks that he_{clitic} goes win, and Piet also
= λx [x thinks that Jef will win] & λy [y thinks that Jef will win] ✓ [strict]
= λx [x thinks that x will win] & λy [y thinks that y will win] ✓ [sloppy]
- (19) Marie paust da zaai gui winnen, en Julia oek.
Mary thinks that she_{strong} goes win, and Julia also
= λx [x thinks that Mary will win] & λy [y thinks that Marie will win] ✓ [strict]
≠ λx [x thinks that x will win] & λy [y thinks that y will win] * [sloppy]
- (20) Marie paust da ze zaai gui winnen, en Julia oek.
Mary thinks that she_{clitic} she_{strong} goes win, and Julia also
= λx [x thinks that Mary will win] & λy [y thinks that Mary will win] ✓ [strict]
≠ λx [x thinks that x will win] & λy [y thinks that y will win] * [sloppy]

2.2 Doubling as movement: the big-DP analysis

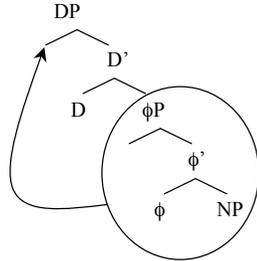

note: if subject clitic = φP and strong pronoun = DP, then a subject clitic is a structural subset of a strong pronoun

big DP-analysis of pronominal doubling: the doubled and the doubling element are initially merged together in one complex 'big DP', which is split up—usually by movement—at a later point in the derivation (cf. Uriagereka 1995, Laenzlinger 1998, Grohmann 2000, Van Craenenbroeck & Van Koppen 2002, Belletti 2005, Poletto 2006, Taraldsen 2006; cf. also Kayne 2002)

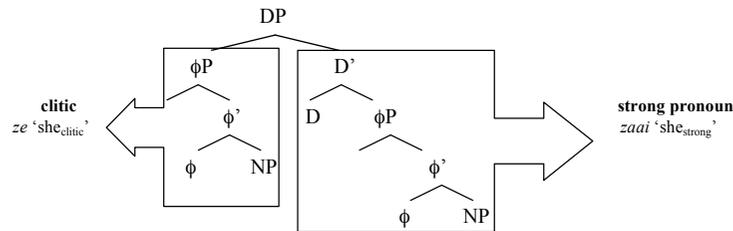

(21) **structure of strong subject pronouns**

(22) structure of a clitic doubled subject (STEP ONE: MOVEMENT)

(23) structure of a clitic doubled subject (STEP TWO: DOUBLE SPELL-OUT)

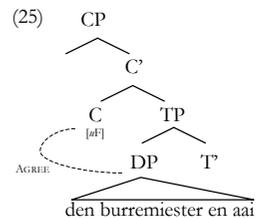

2.3 Doubling as agreement: doubling with coordinated subjects

problem: the big DP-analysis of clitic doubling cannot account for doubling of coordinations:

(24) da ze t [den burremiester en aai] suimen gonj duun.
that they_{clitic} it_{clitic} the mayor and he together will do
'that the mayor and he will do it together.'
[Wambbeck Dutch]

→ given that the NP-portion of *den burremiester en aai* 'the mayor and he' contains (a coordination with) lexical material, it cannot be spelled out as the clitic *ze* 'she'

proposal: this type of doubling is the result of an Agree-relation between (unvalued features of) a C-head and the subject

note: this C-head must be distinct from the one triggering comp-agreement:

(26) Iedere vint peist da-n de burgemeester en ie da t'hope moetn uplosn.
every man thinks that-PL the mayor and he that together must solve
'Every man thinks the mayor and he should solve that together.'
[Blankenberge Dutch]

→ we return to the distinction between comp-agreement and agreement-driven clitic doubling in section four

technical implementation of the analysis: the Agree-relation in (25) is triggered by the feature [C(ontext)-D(ependent)], which signals that pronouns "must be assigned a value by the context-determined assignment function" (Bianchi 2005:8) → only pronouns (or coordinations containing at least one pronoun) can be doubled

supporting evidence: Bianchi (2005): bound variable pronouns do not carry a [C-D]-feature → clitic doubling with coordinations is not allowed with bound variables:

(27) Elke man_i paust da ze t aai_{i/k} en zaai suimen muutn oplossen.
every man thinks that they_{clitic} it_{clitic} he and she together must solve
'Every man thinks he and she should solve that together.'
[Wambbeck Dutch]

(28) Elke man_i paust da aai_{i/k} en zaai da suimen muutn oplossen.
every man thinks that he and she that together must solve
'Every man thinks he and she should solve that together.'
[Wambbeck Dutch]

3. Analysis

3.1 Core of the analysis

3.1.1 Two properties of object clitics

(i) object clitics are disallowed in non-finite contexts

subject infinitives

(29) <>*n/em> gezien emmen is ni genoeg.
<him_{clitic} / him_{weak}> seen have-_{INF} is not enough
'Having seen him is not enough.'
[Wambbeck Dutch]

root infinitives

(30) En gou <>*n/em> helpen zeker?
and you <him_{clitic} / him_{weak}> help-_{INF} surely
'And you're gonna help him, I suppose?'
[Wambbeck Dutch]

ECM-clauses

(31) 'K em goed da-ge <n/*em> gou <>*n/em>
I have heard that-you_{clitic} <him_{clitic} / him_{weak}> you_{strong} <him_{clitic} / him_{weak}>
Marie <>*n/em> uin de kinjern etj zien introduceern.
Mary <him_{clitic} / him_{weak}> to the children have see introduce
'I have heard that you saw Marie introduce him to the children.'
[Wambbeck Dutch]

infinitival clauses with a complementizer

(32) Z' ei geprobeed om <*n/ em > t' elpen.
she has tried to <him_{clitic} / him_{weak}> to help
'She has tried to help him.'

[Wambeek Dutch]

implementation: object clitics carry an unvalued [Fin]-feature that needs to be valued by (matching features on) a finite Fin-head

(ii) object clitics move in narrow syntax to a position in the left periphery

→ object clitics surface in a very specific left-peripheral position (Van Craenenbroeck & Van Koppen 2002; Van Craenenbroeck & Haegeman 2007)

(33) da ge (n) gou (*n) gezien etj.
that you_{clitic} him_{clitic} you_{strong} him_{clitic} seen have
'that you have seen him.'

[Wambeek Dutch]

→ object clitics feed Condition C (Van Craenenbroeck & Van Koppen 2002; Van Craenenbroeck & Haegeman 2007):

(34) a. dan-t_{i/j} den aigeneir van 't lemmeken_i zelf ei muutn doewtuun.
that-it_{clitic} the owner of the lamb has had to kill
'that the owner of the lamb has had to kill it (not the lamb) himself.'
b. da den aigeneir van 't lemmeken_i et_{i/j} zelf ei muutn doewtuun.
that the owner of the lamb it_{weak} self has have.to kill
'that the owner of the lamb has had to kill it (not the lamb) himself.'

[Wambeek Dutch]

implementation: object clitics move in narrow syntax to a position in the left periphery, i.e. they target the [Fin]-feature on Fin°

3.1.2 No unvalued features on phase heads

Richards (2007): Feature Inheritance is the optimal way of reconciling two at first sight conflicting premises:

- Premise 1** Value and Transfer of *n*F must happen together.
- Premise 2** The edge and non-edge (complement) of a phase are transferred separately.
- Conclusion** *n*F must spread from edge to non-edge (i.e. from C to T, *n** to V, etc.).

in other words:

- Feature Inheritance is motivated by the fact that the *n*F of a phase head must be valued and transferred at the same time.
- This requirement is met when the non-phase head of its complement inherits its *n*F.

consequence: a head that acquires *n*F in the course of the derivation cannot be (or is no longer) a phase head

3.1.3 Movement of the object clitic voids the phasehood of Fin

conclusion from section 3.1.1: object clitics have a [*n*Fin]-feature and move to Fin° in narrow syntax

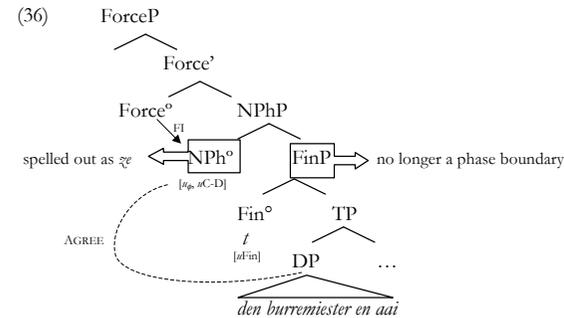

conclusion from section 3.1.2: heads that carry unvalued features during the derivation are not phase heads

consequence: object clitic movement to Fin° voids the phasehood of FinP (on FinP as a phase, see Branigan 2005, López 2009). In other words, in clauses that contain an object clitic, FinP ceases to be a phase.

3.2 Doubling via agreement: anti-intervention

(35) da ze t [den burremiester en aai] suimen gonj duun.
that they_{clitic} it_{clitic} the mayor and he together will do
'that the mayor and he will do it together.'

[Wambeek Dutch]

main ingredients of the analysis:

- the unvalued features of (the higher phase head) Force° are inherited by a lower non-phase head NPh°
- movement of the object clitic to Fin° voids the phasehood of FinP
- because FinP is no longer a phase, NPh° can probe the subject in specTP and value its phi- and [C-D]-features
- this valued feature bundle is spelled out as the subject clitic ze 'they'

(37) *da ze [den burremiester en aai] da suimen gonj duun.
that they_{clitic} the mayor and he that together will do
INTENDED: 'that the mayor and he will do that together.'

[Wambeek Dutch]

prediction: given that first conjunct clitic doubling involves movement, it should not be sensitive to the phasal status of FinP, i.e. there should be no anti-intervention from object clitics:

- (44) Ik venj da **se** [zaailn en gaailn] da suimen moetj oplossen.
I find that they_{clitic} they and you_{pl} that together must_{2pl} solve
'I think they and you should solve that together.'

[Wambeek Dutch]

4 Comp-agreement vs. clitic doubling

4.1 No anti-intervention with comp-agreement

Comp-agreement is not sensitive to intervention of object clitics:

- (45) a. Ik vin da-n ie en zie da saom moetn uplosn.
I think that_{-3pl} he and she that together must solve
'I think that he and her should solve that together.'
b. Ik vin da-n t ie en zie saom moetn uplosn
I think that_{-3pl} it he and she together must solve
'I think that he and her should solve that together.'

[Blankenberge Dutch]

The Compagr Probe has different features than Force^o: it has phi-features but no [C-D]-feature

- (46) k peinzen **da-n** Pol en Valère Marie kenn-en.
I think that_{-3pl} Pol and Valère Marie know_{-pl}
'I think that Pol and Valère know Marie.'

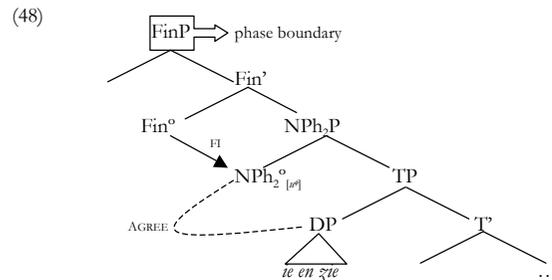

[West Flemish]

Proposal: the Compagr Probe is Fin^o.

4.2 Analysis

- (47) Ik vin da-n ie en zie da saom moetn uplosn.
I think that_{-3pl} he and she that together must solve
'I think that he and her should solve that together.'

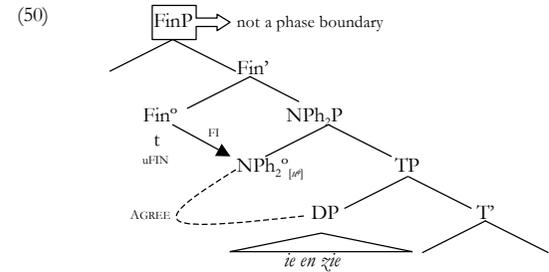

[Blankenberge Dutch]

Object movement does not have an effect on the Compagr-Probe (Fin^o)

- (49) Ik vin da-n t ie en zie saom moetn uplosn
I think that_{-3pl} it he and she together must solve
'I think that he and her should solve that together.'

[Blankenberge Dutch]

5 Conclusion

5.1 Summary

Data

(51) Type of subject DP	no object clitic	object clitic
pronoun	✓	✓
coordination with a pronominal conjunct	*	✓
coordination with no pronominal conjunct	*	*
non-pronominal DP	*	*

Analysis

- Two types of subject doubling:
 - Doubling via movement: clitic is part of pronominal subject DP (Big DP) and moves into the CP-domain
 - Doubling via Agree: clitic spells out phi-features of Force, Force agrees with subject
- Object clitic intervention:
 - The CP-domain has two phi-feature probes: Force^o and Fin^o.
 - Fin^o is phase and intervenes between Force^o and the subject
 - Object clitic moves to Fin^o and voids the phasehood of Fin^o
 - Force^o can probe the subject

(52) Type of doubling

Type of subject DP	FinP is a phase (no object clitic)	FinP is not a phase (object clitic)
Pronoun	Doubling via movement	Doubling via movement <i>or</i> Doubling via Agree
coordination pronominal conjunct (First Conjunct)	Doubling via movement	Doubling via movement <i>or</i> Doubling via Agree
coordination with a pronominal conjunct (Full)	*	Doubling via Agree
coordination with no pronominal conjunct	*	*
non-pronominal DP	*	*

5.2 Question for further research

1. Not all dialects have an ameliorating effect of object clitic intervention:

(53) * 'k peis dame 't zij en ekik wel samen aan kunn.
I think that-we it they and I part together solve

[Nieuwkerken Waas Dutch]

- Possible explanations for dialects of this type:
 - subject clitics do not move in syntax but at PF (Van Craenenbroeck & Haegeman 2007:173, note 8)
 - object clitics are not sensitive to finiteness and hence have no [*u*Fin]-feature

2. How does our view on phases relate to existing accounts?

Bošković (to appear: 3): “X, which works as a phase, ceases to work as a phase when another phrase Y is added on top of X in the extended projection of the same lexical category (with X being the highest projection in this domain when Y is absent).”

Den Dikken (2007:1, example (3)): “Phase Extension: syntactic movement of the head H of a phase α up to the head X of the node β dominating α extends the phase up from α to β ; α loses its phasehood in the process, and any constituent on the edge of α ends up in the domain of the derived phase β as a result of Phase Extension.”
