Limitations on Concept Formation for Person

In Personal Pronouns

Outline

1. The Atoms of Person
2. The Concept Formation Constraint
3. Conclusion
4. Questions

1. The Atoms of Person

- The atoms of person:
1, 2, 3: sp, hr, non-part (Dutch)

	sg		pl	
1	ik	sp	wij	sp +associates
2	jij	hr	jullie	hr +associates
3	hij, zij, het	non-participant	zij	non-participant +associates

- Problem: inclusive (Marquesan Cablitz 2006)

	sg		pl	
INCL			ta-tou	sp+hr (+associates)
1	au	sp	ma-tou	sp +associates
2	koe	hr	ko-tou	hr +associates
3	ia	non-part	a-tou	non-part +associates

Question: WHAT is the inclusive?

- Semantics: group consisting of SP & HR
- Morphology:
 - Most often morphologically independent (80%) (Daniel 2005)

E.g. Tümpisa Shoshone (Dayley 1989)

	sg	pl
INCL		ta-mmü
1	nü	nü-mmü
2	ü	mü-mmü
3	(Demonstratives)	

– Otherwise: related to 1st (and 2nd)

E.g. Quechua (Adelaar 1977)

	sg	pl
INCL		nuxa-ñči(k)
1	nuxa	nuxa:-guna
2	xam	xam-guna
3	pay	pay-guna

– NOT a plural of 1st

– NOT an extra dimension similar to number

Question: INCL as an atom of person?

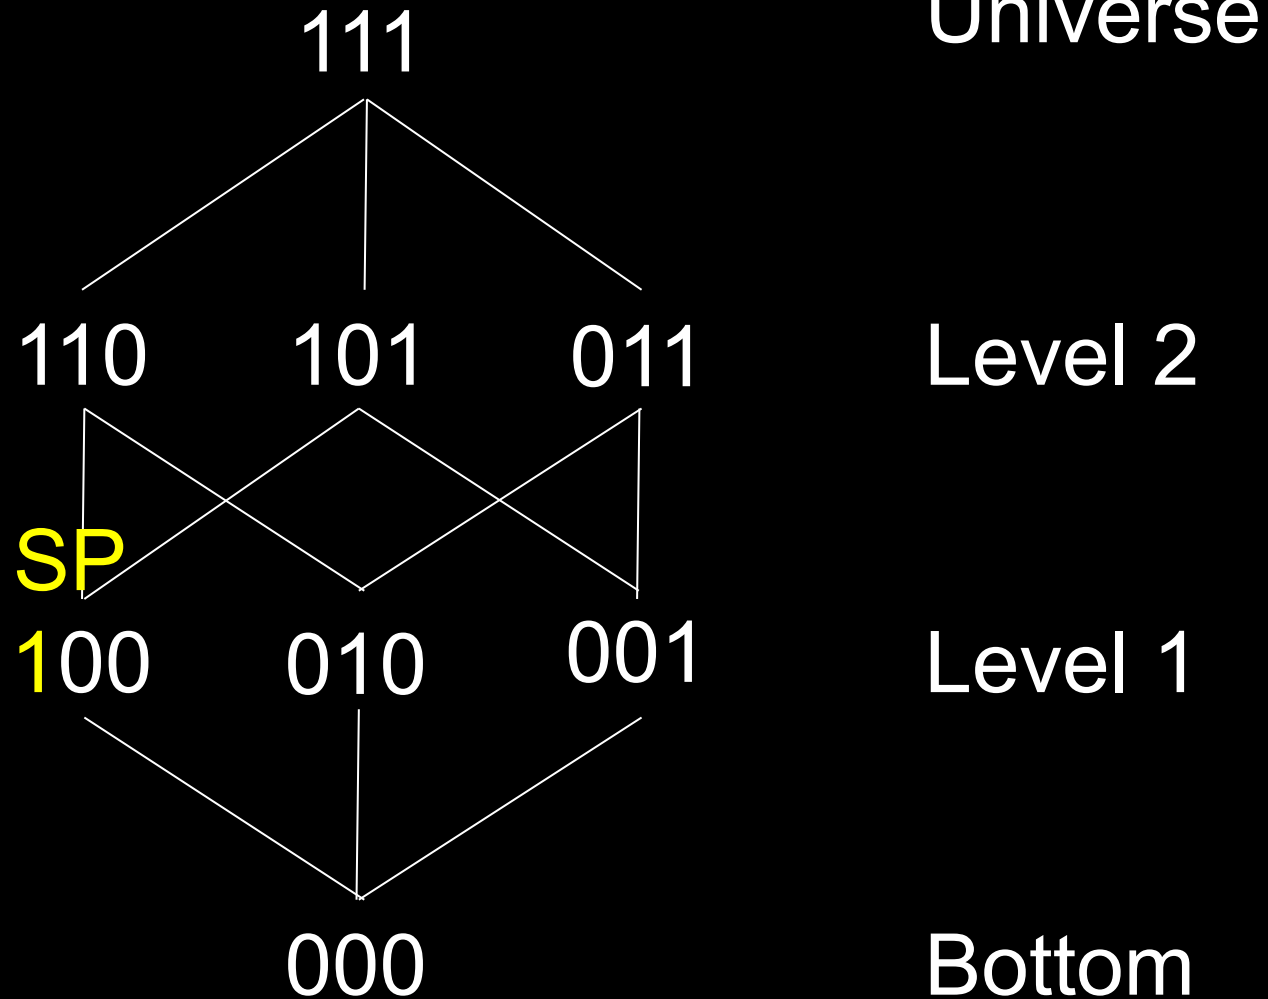

Solution:

- Atoms for 1, 2, 3
- Represented as bitstrings
- In Hasse Diagram

(Smessaert 2009, Jaspers 2012)

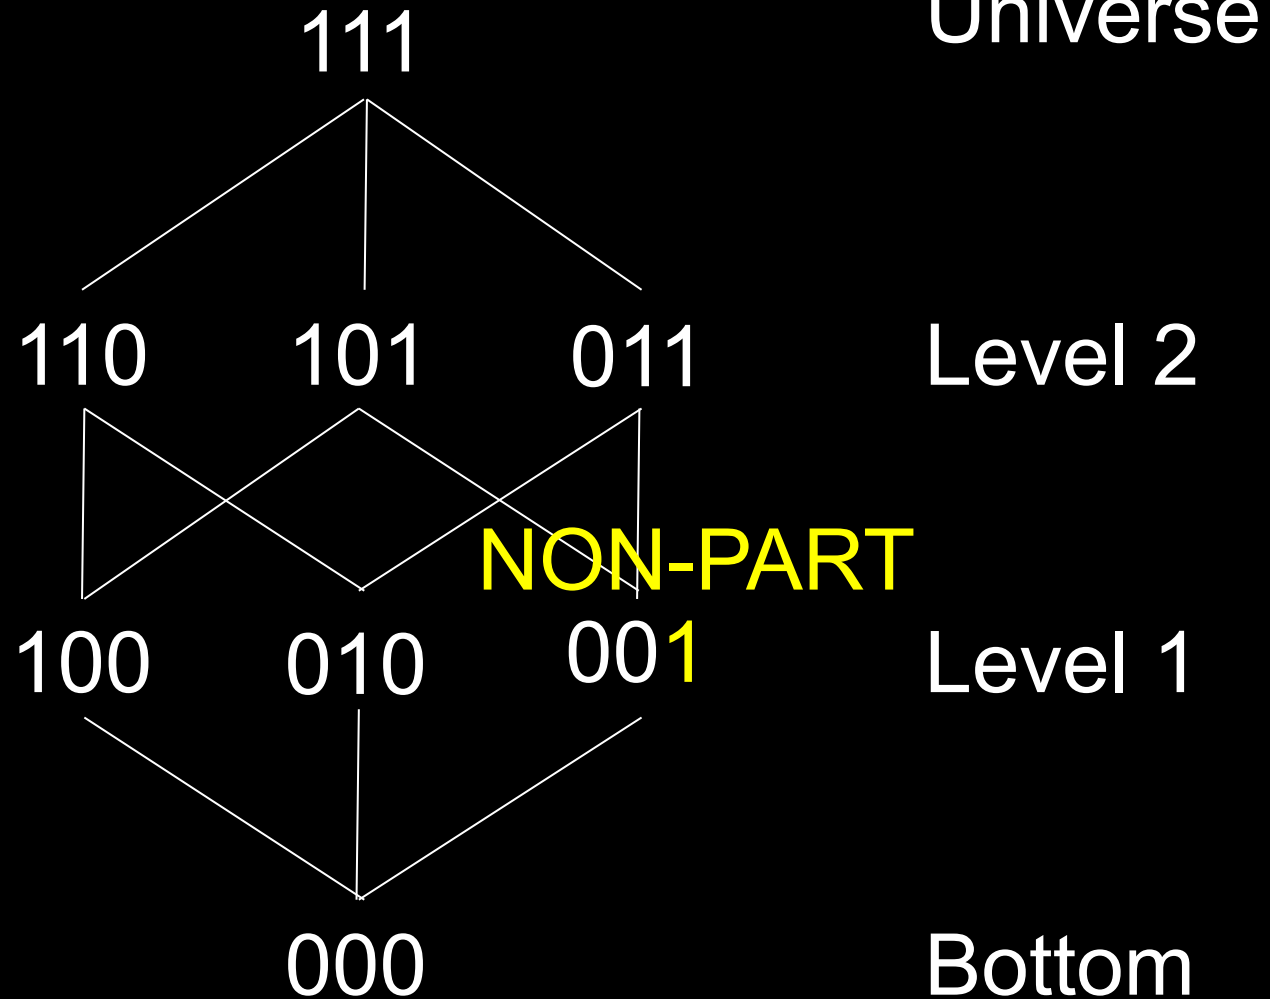

1st person

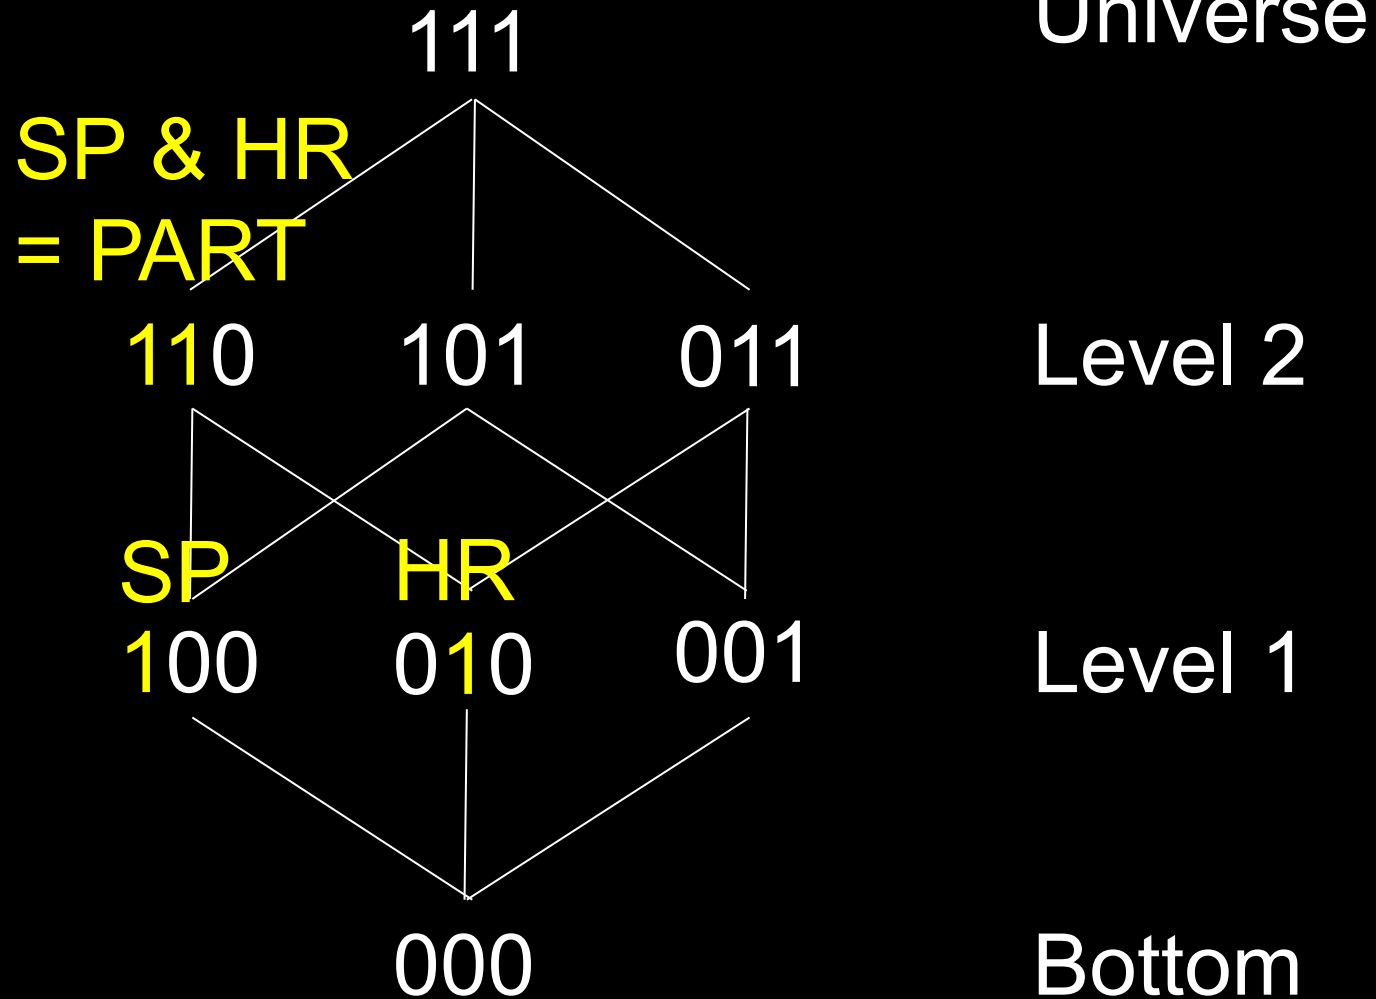

2nd person

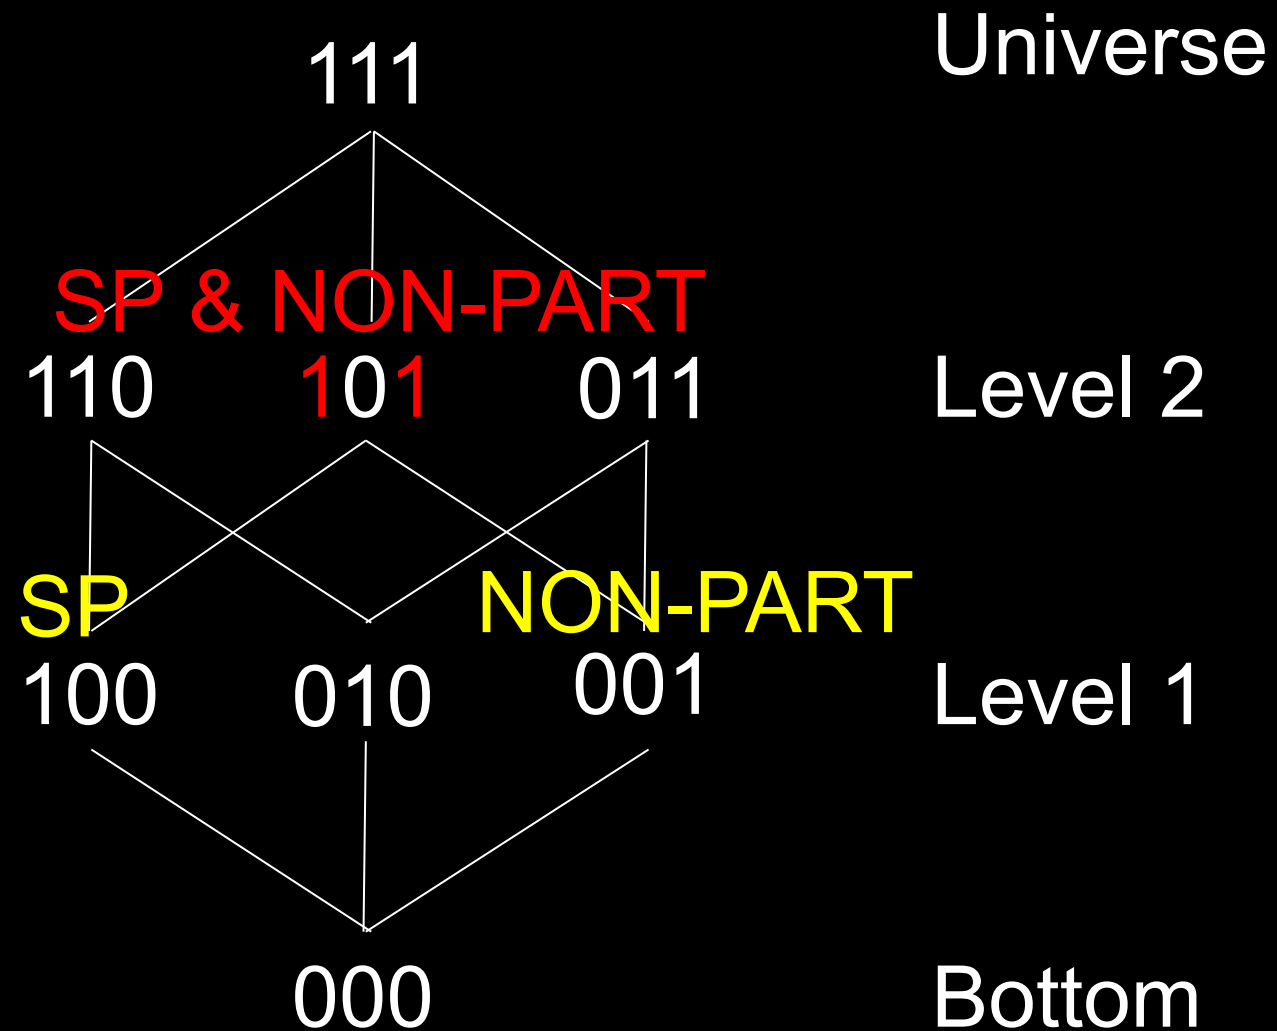

3rd person

Inclusive

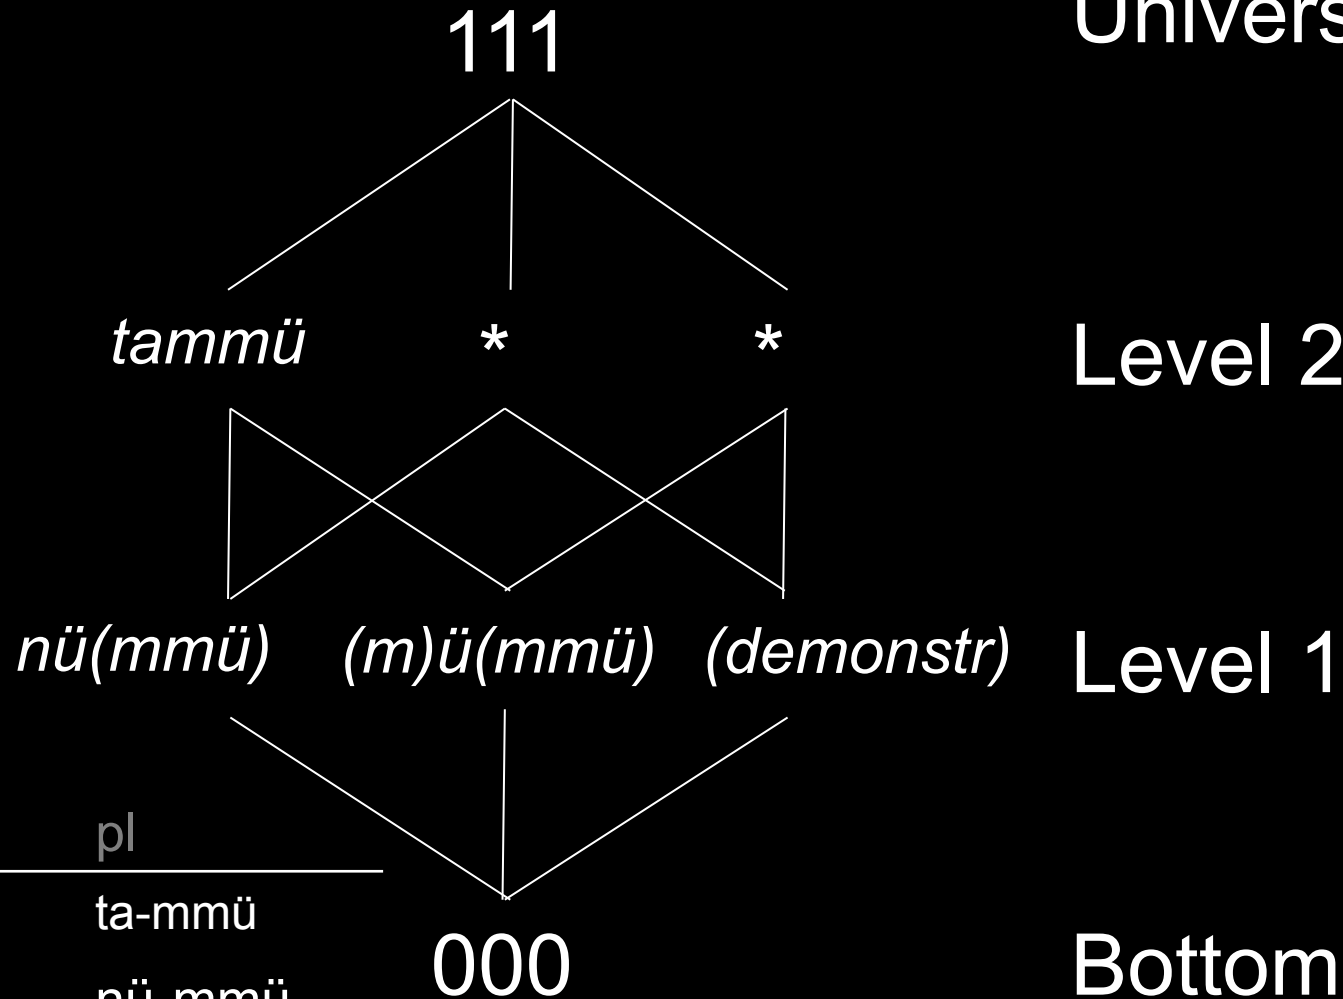

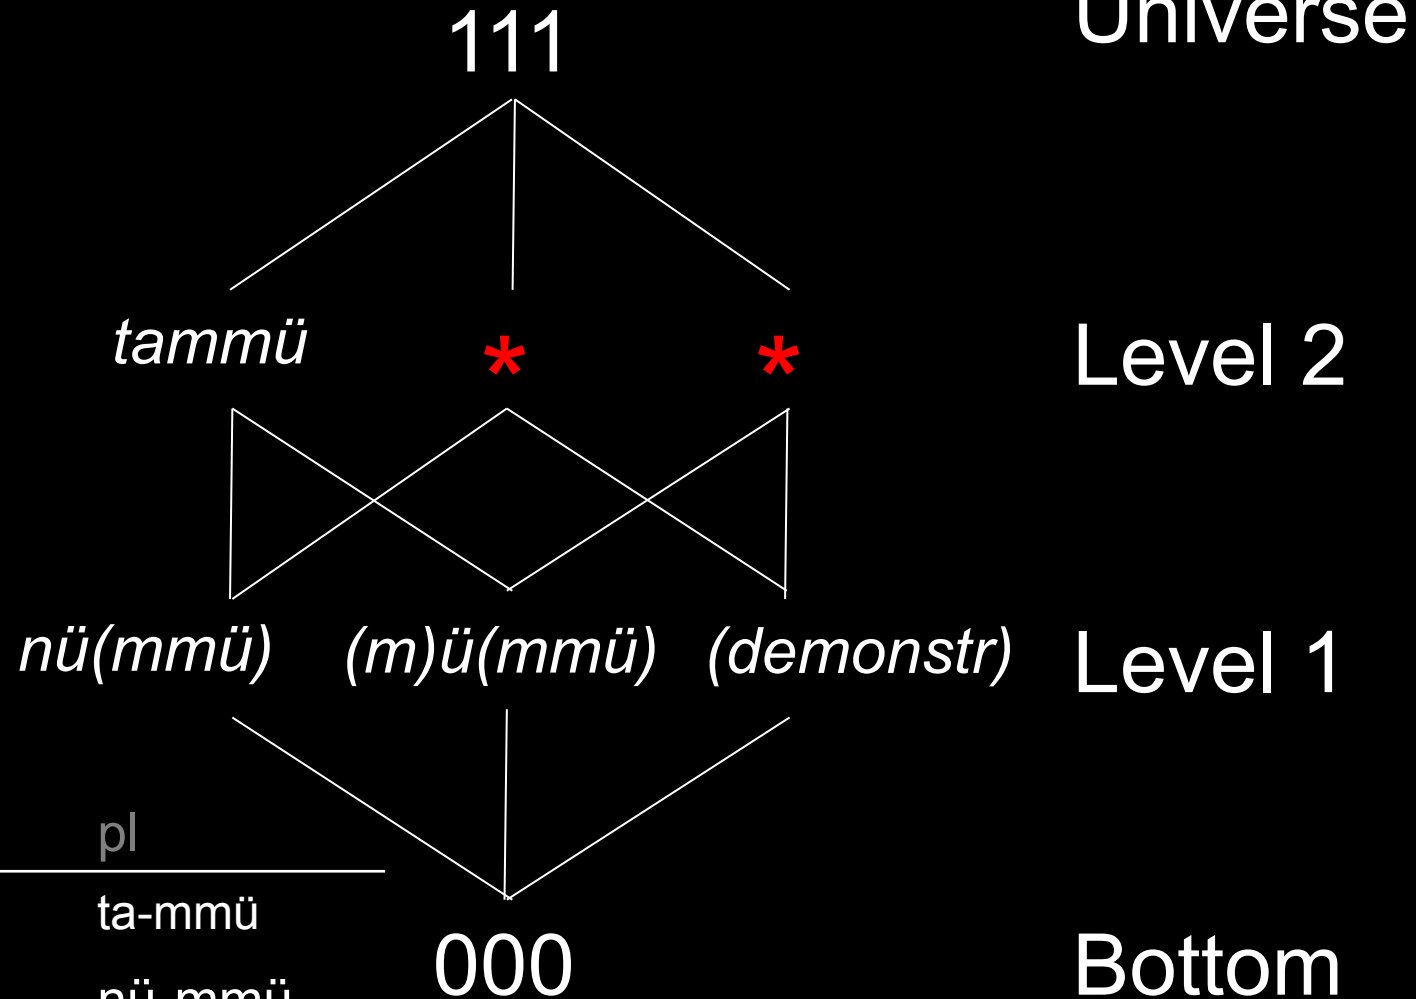

E.g. Tümpisa Shoshone

	sg	pl
INCL		ta-mmü
1	nü	nü-mmü
2	ü	mü-mmü
3	(Demonstratives)	

E.g. Tümpisa Shoshone

	sg	pl
INCL		ta-mmü
1	nü	nü-mmü
2	ü	mü-mmü
3	(Demonstratives)	

Question:

Why are other combinations of the atoms of person unlexicalised?

Solution:

The Concept Formation Constraint in the kite framework

2. Concept Formation Constraint

2.1. The Kite Framework

2.2. Claim

2.3. A Mereology

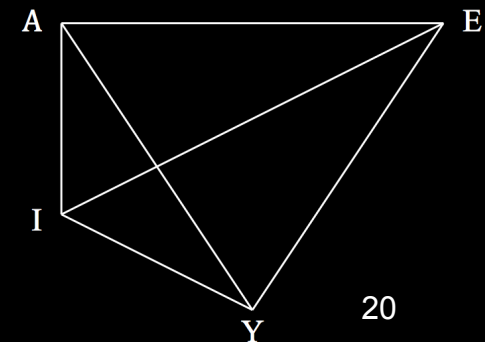

2.4. Deriving the Person Kite

2.5. The Unlexicalised Combinations

2.1. The Kite Framework

Lexicalisation in certain closed lexical fields is restricted by a **concept formation constraint** (Jaspers 2012, Seuren & Jaspers 2014):

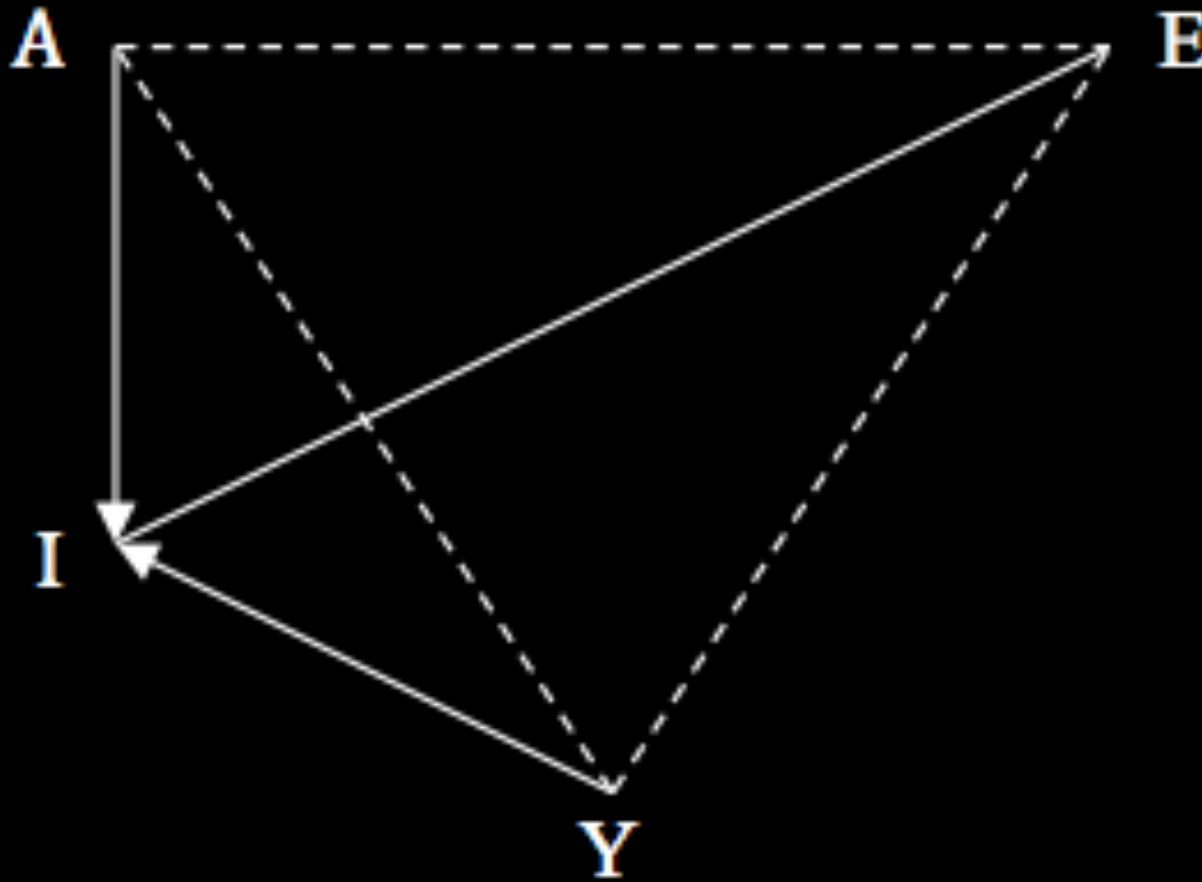

- Logical hexagon
(Jacoby, Sesmat, Blanché)
O and U
never lexicalised
- Result: **kite** structure

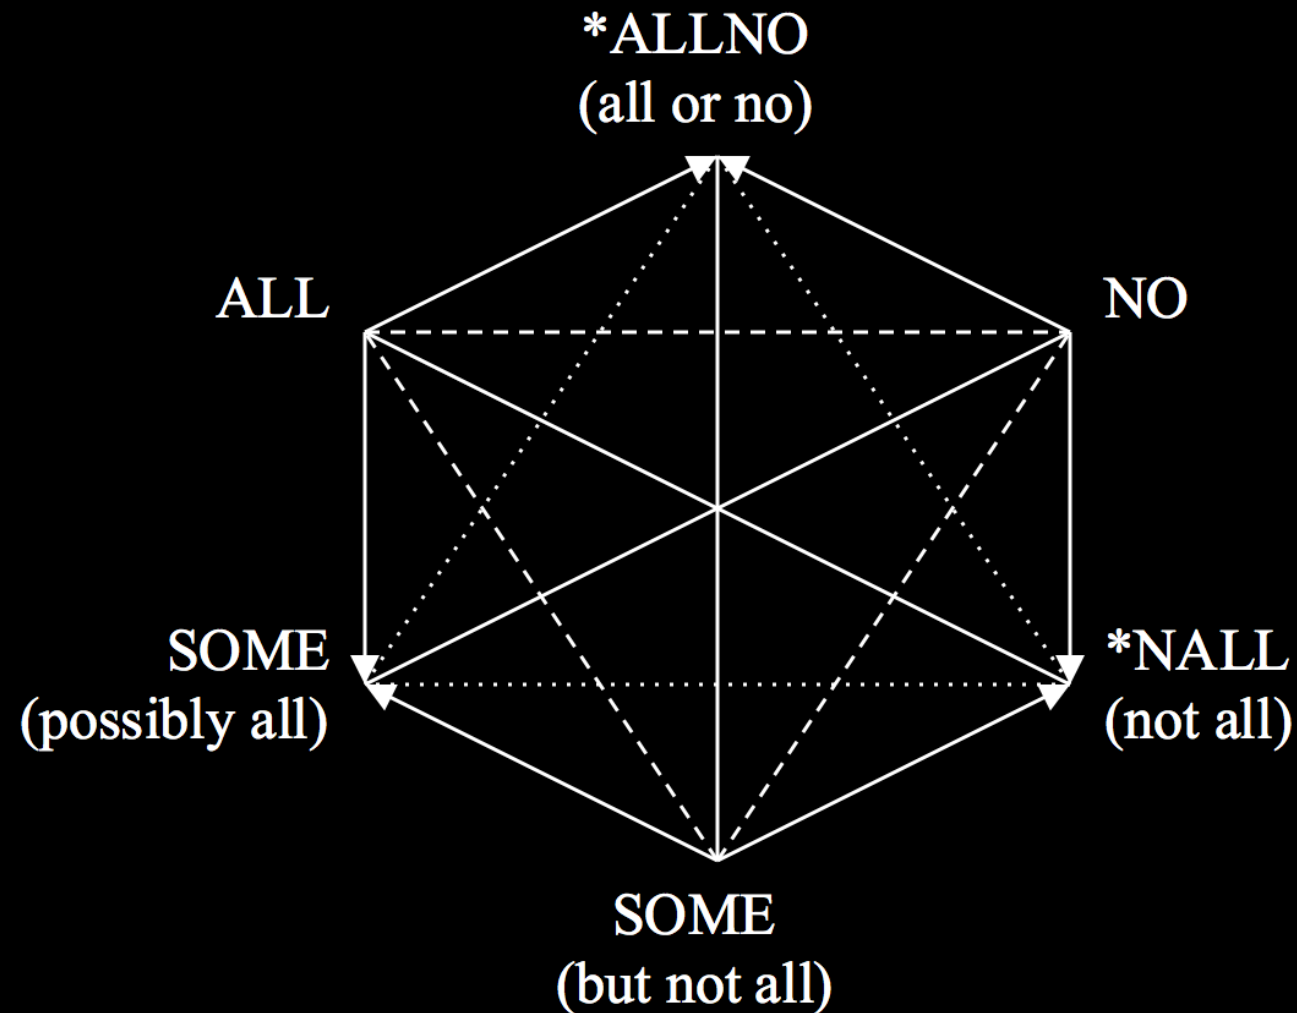

The Hexagon

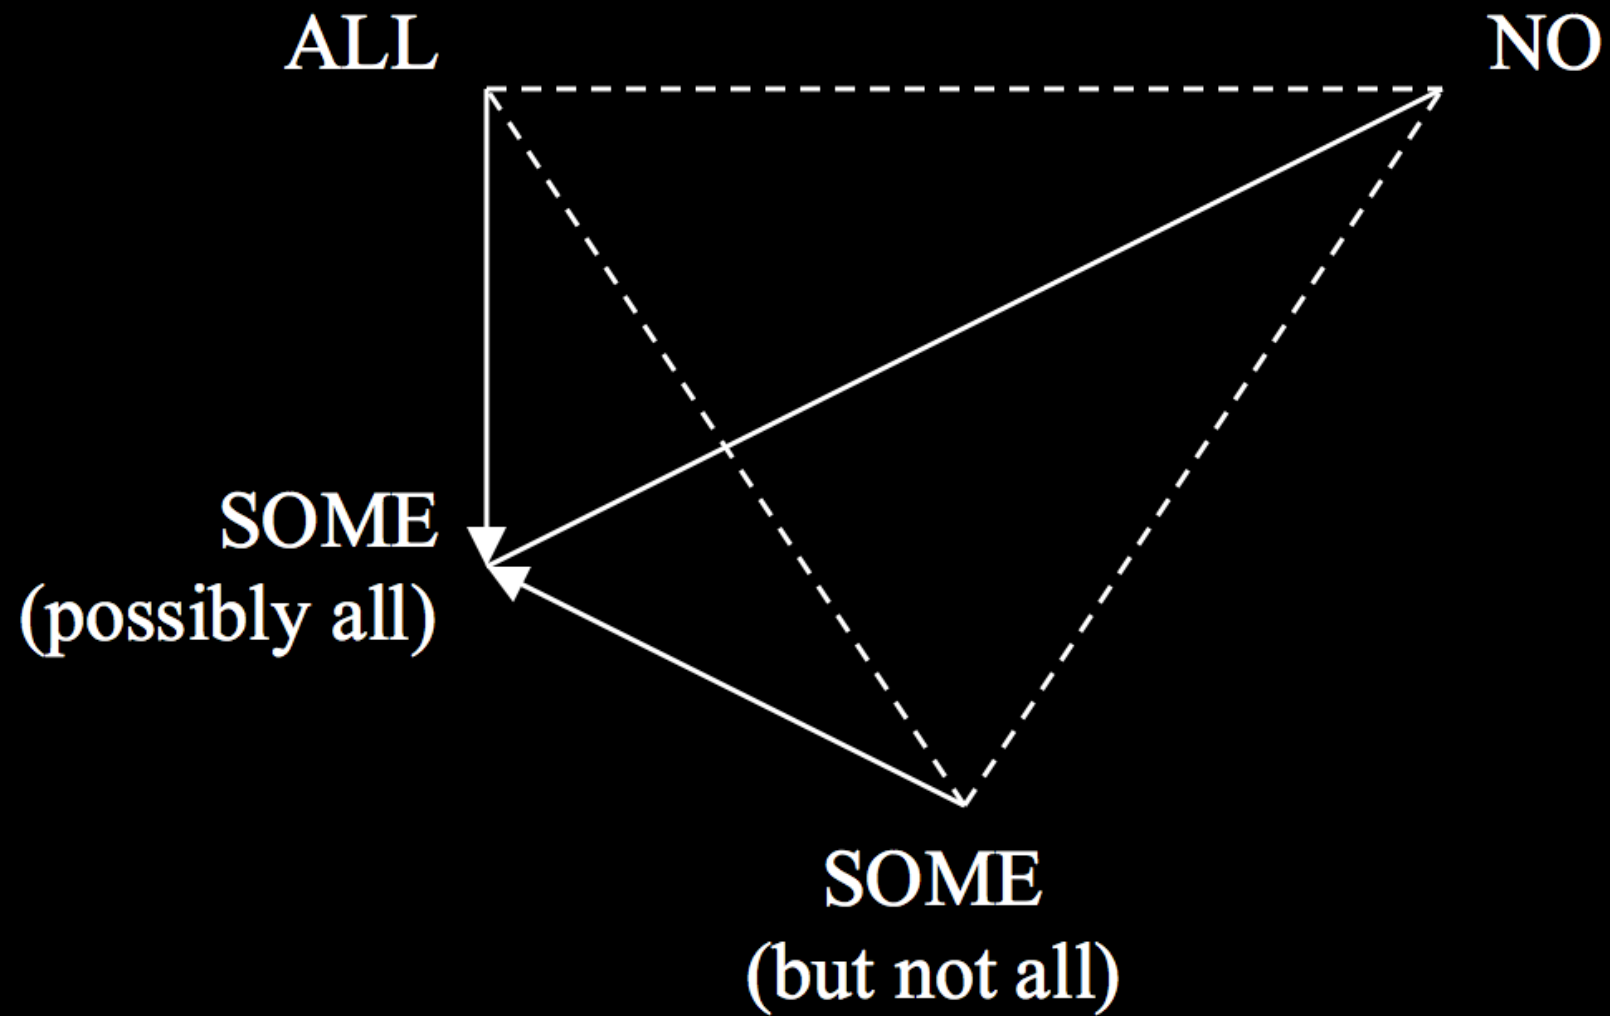

The Kite

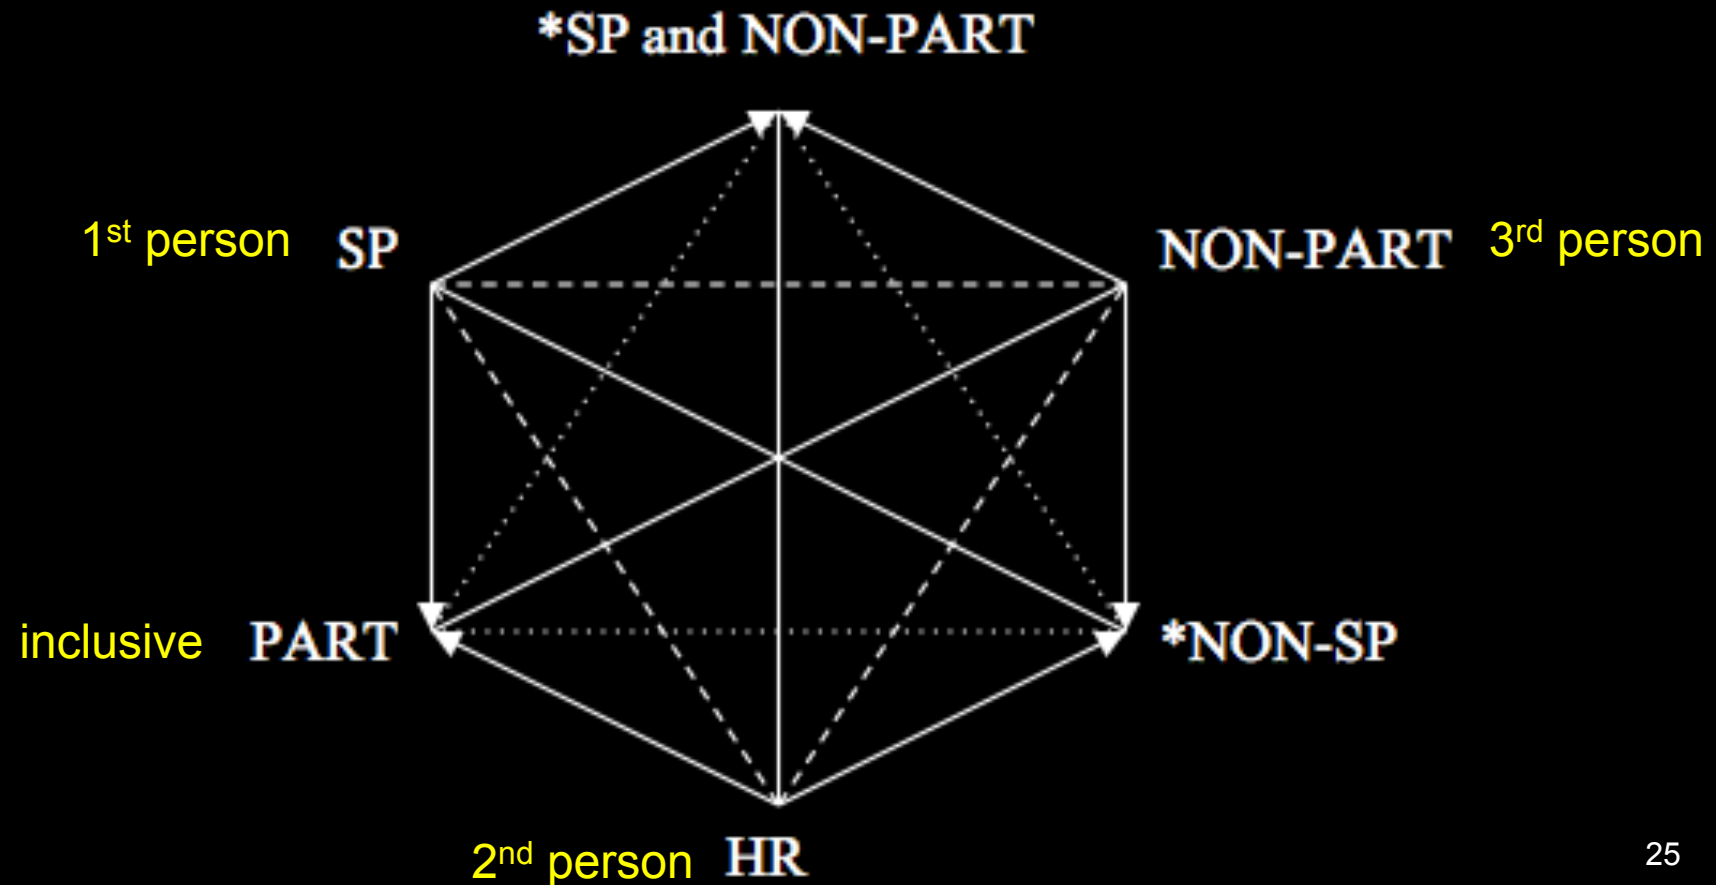

Propositional Logic Quantifiers

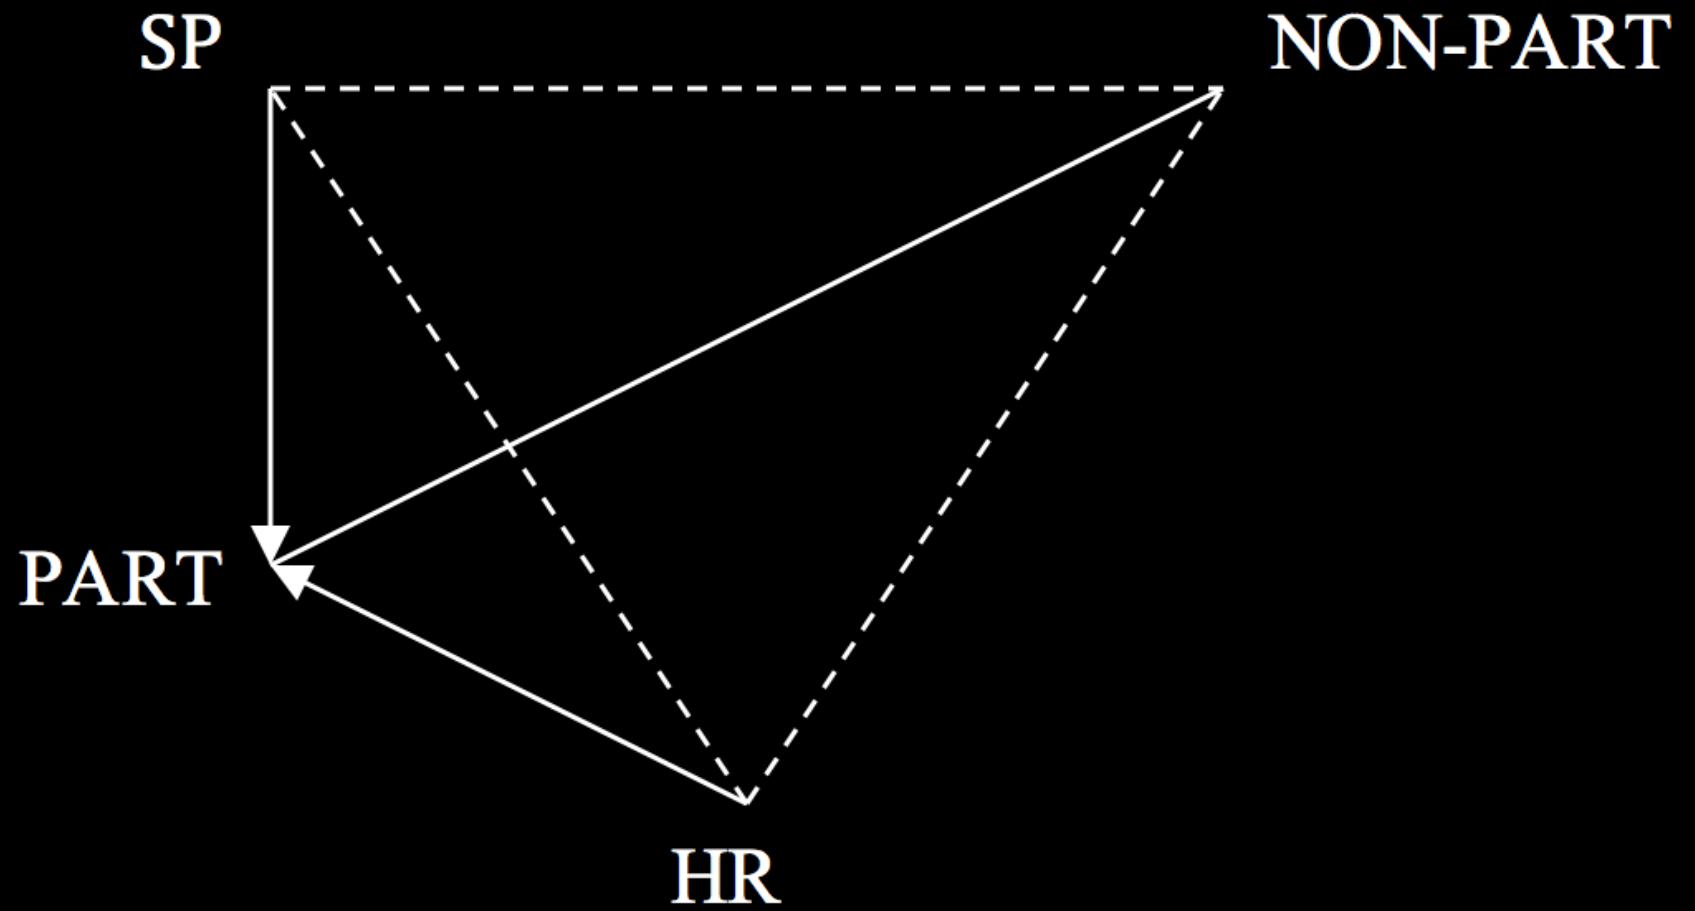

2.2. Claim

Person deixis: corresponding limitations on concept formation

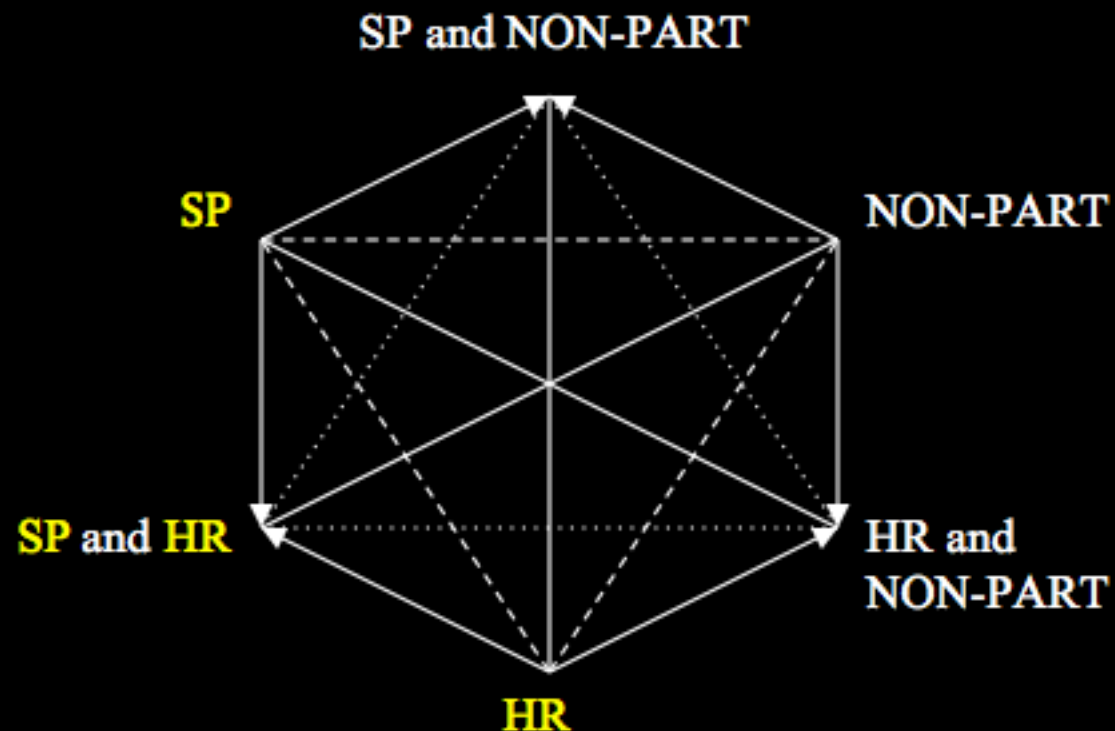

2.3. Mereology

Mereology = theory of parthood relations

(Jaspers 2012, Varzi 2016)

- SP and HR are **proper parts** of PART
- PART = **mereological sum** of SP and HR

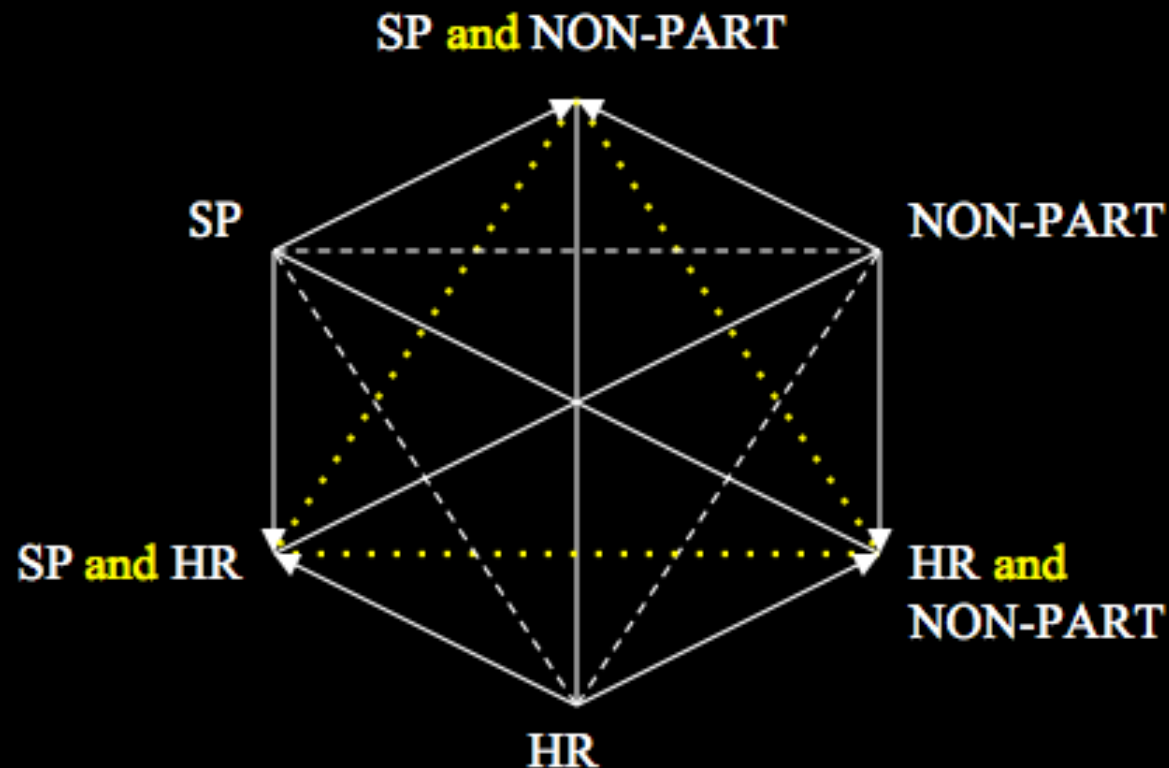

Logical systems: vs.

- Quantifiers
- Entailment relations
- I-O-U: disjunction

Mereologies:

- Person
- Proper parthood rels
- I-O-U: mereological sum

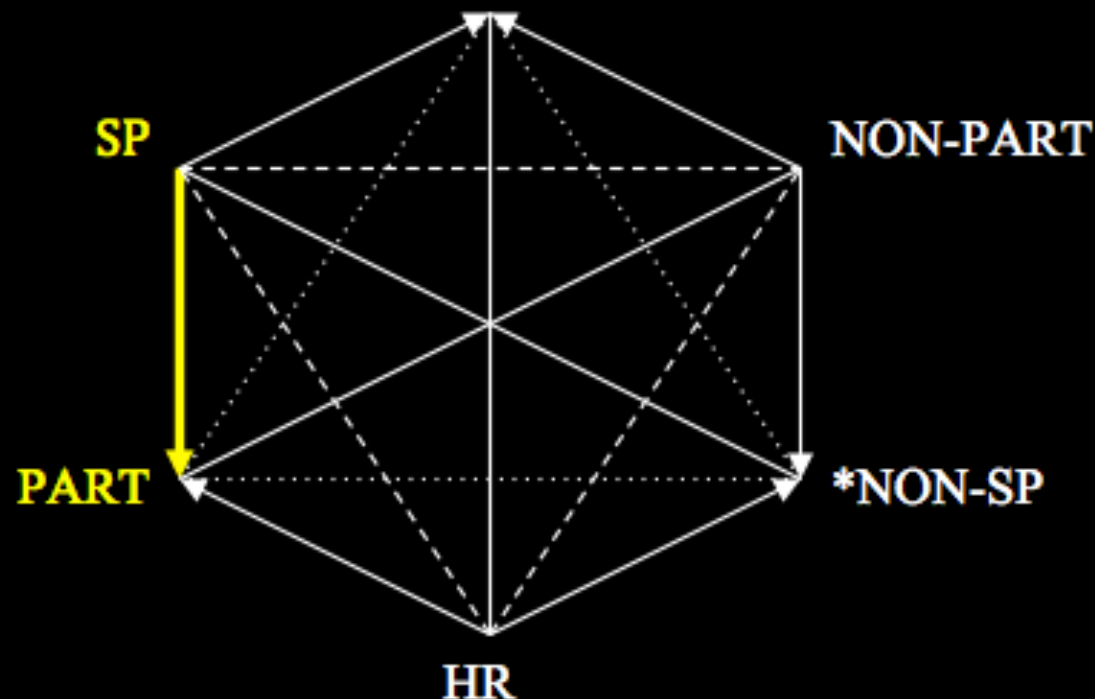

2.4. Deriving the Person Kite

Mereology:

Kite follows from a single **proper parthood** rel

(Seuren & Jaspers 2014) ***SP and NON-PART**

Proper Parthood

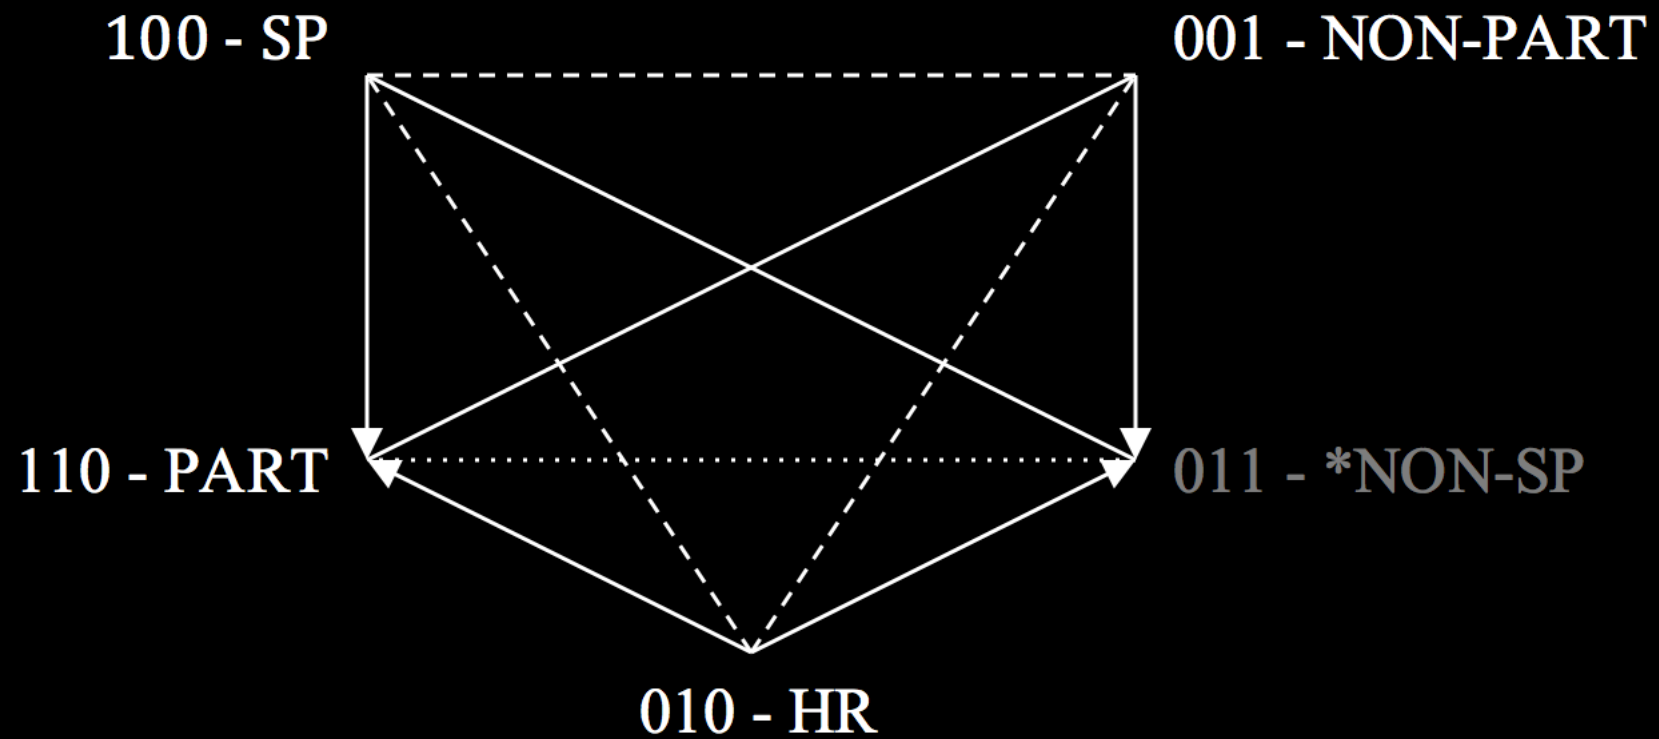

Contradiction

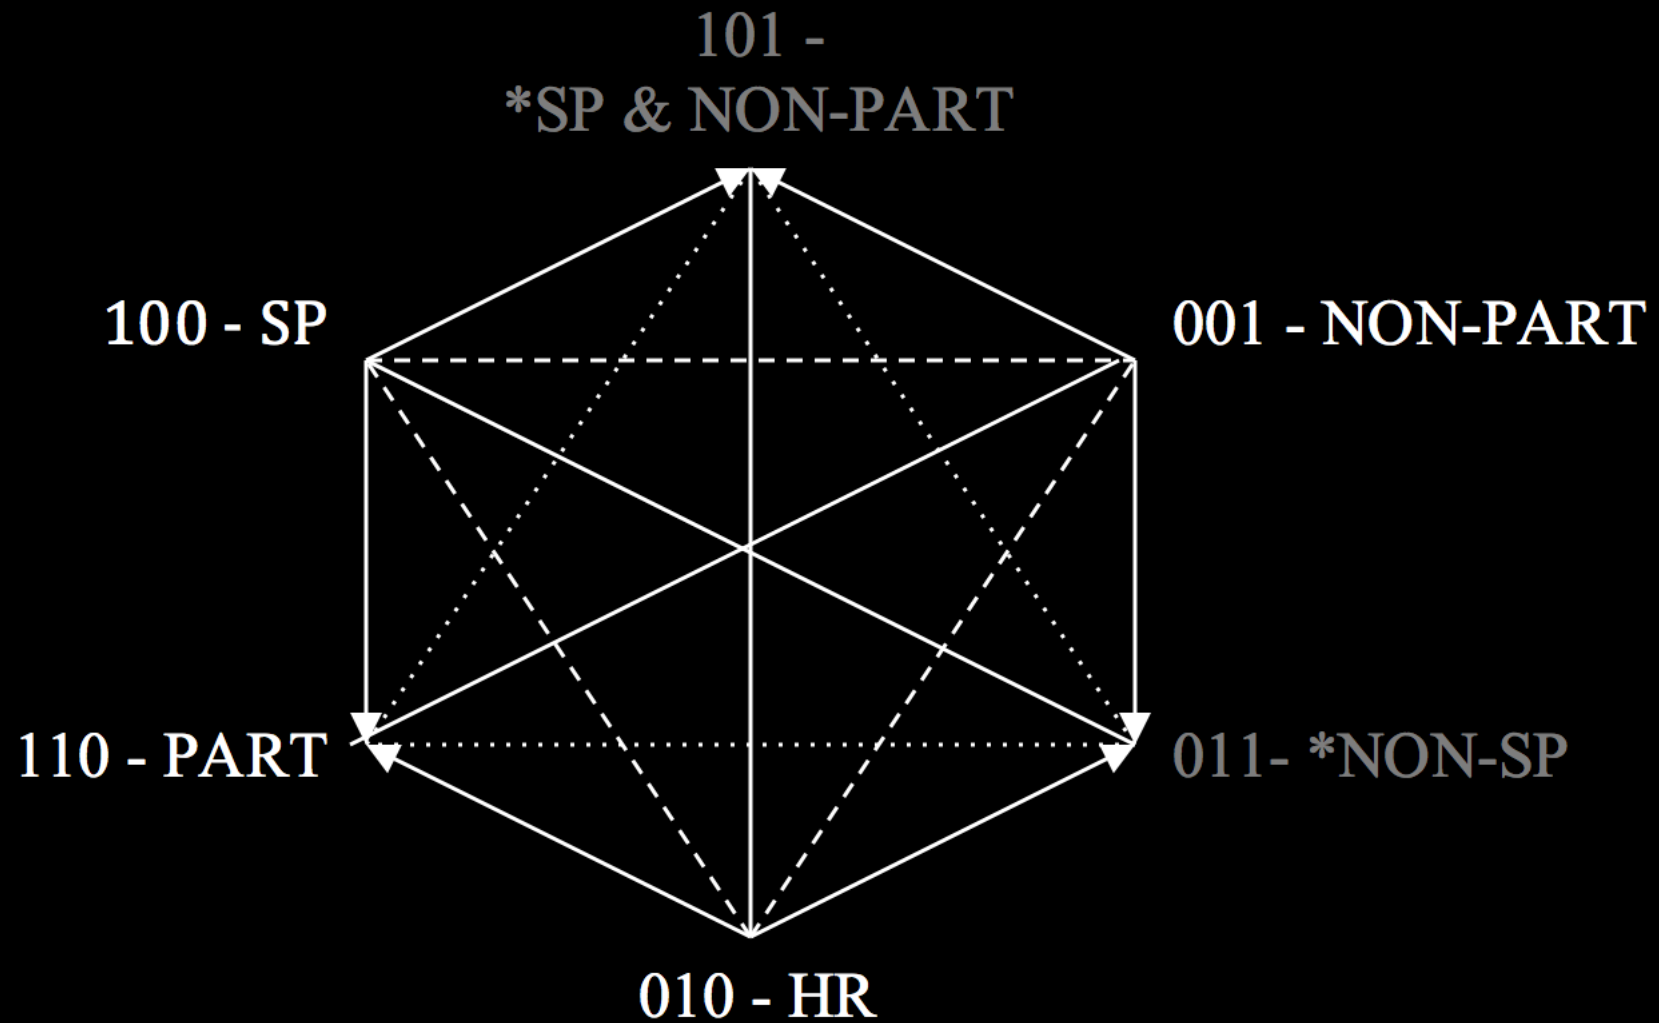

Contrariety

The kite: *inclusive* as only complex person

Other combinations: predicted by kite to be unlexicalised

Quechua

(Adelaar 1977)

2.4. The Person Kite

	sg	pl
INCL		nuxa-ñči(k)
1	nuxa	nuxa:-guna
2	xam	xam-guna
3	pay	pay-guna

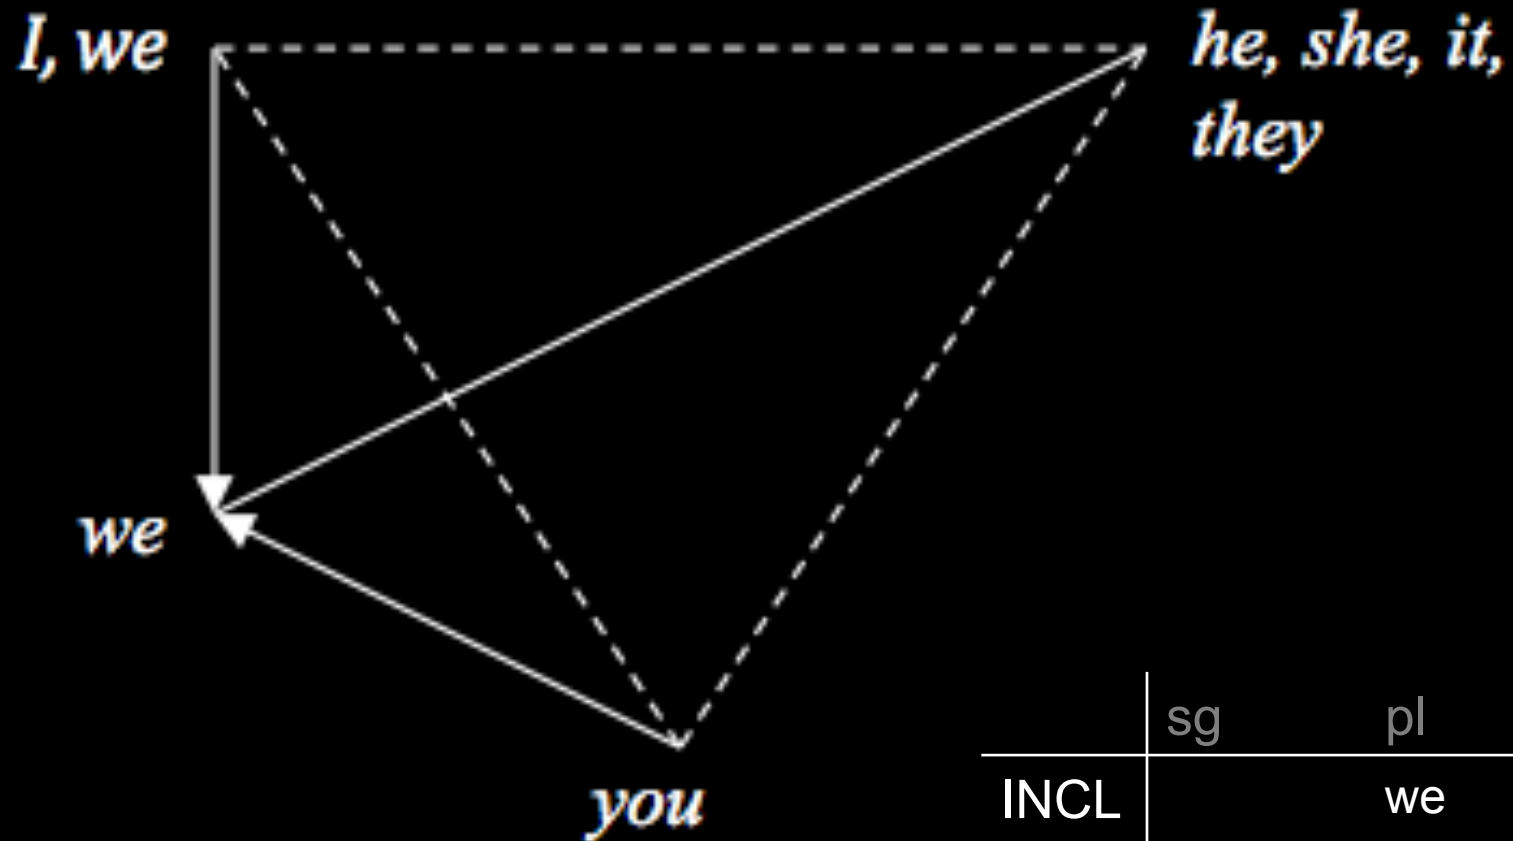

Tümpisa Shoshone

(Dayley 1989)

2.4. The Person Kite

	sg	pl
INCL		ta-mmü
1	nü	nü-mmü
2	ü	mü-mmü
3	(Demonstratives)	

	sg	pl
INCL		<i>we</i>
1	<i>I</i>	<i>we</i>
2	<i>you</i>	<i>you</i>
3	<i>he,</i> <i>she, it</i>	<i>they</i>

2.5. The Unlexicalised Combinations: O & U

Crucially: 3rd ≠ pl

- Many analyses: +3 = pl

e.g:

- 3sg = 3
- 3pl = 3+3
- 2sg = 2
- 2pl = 2+3

- O & U are lexicalised

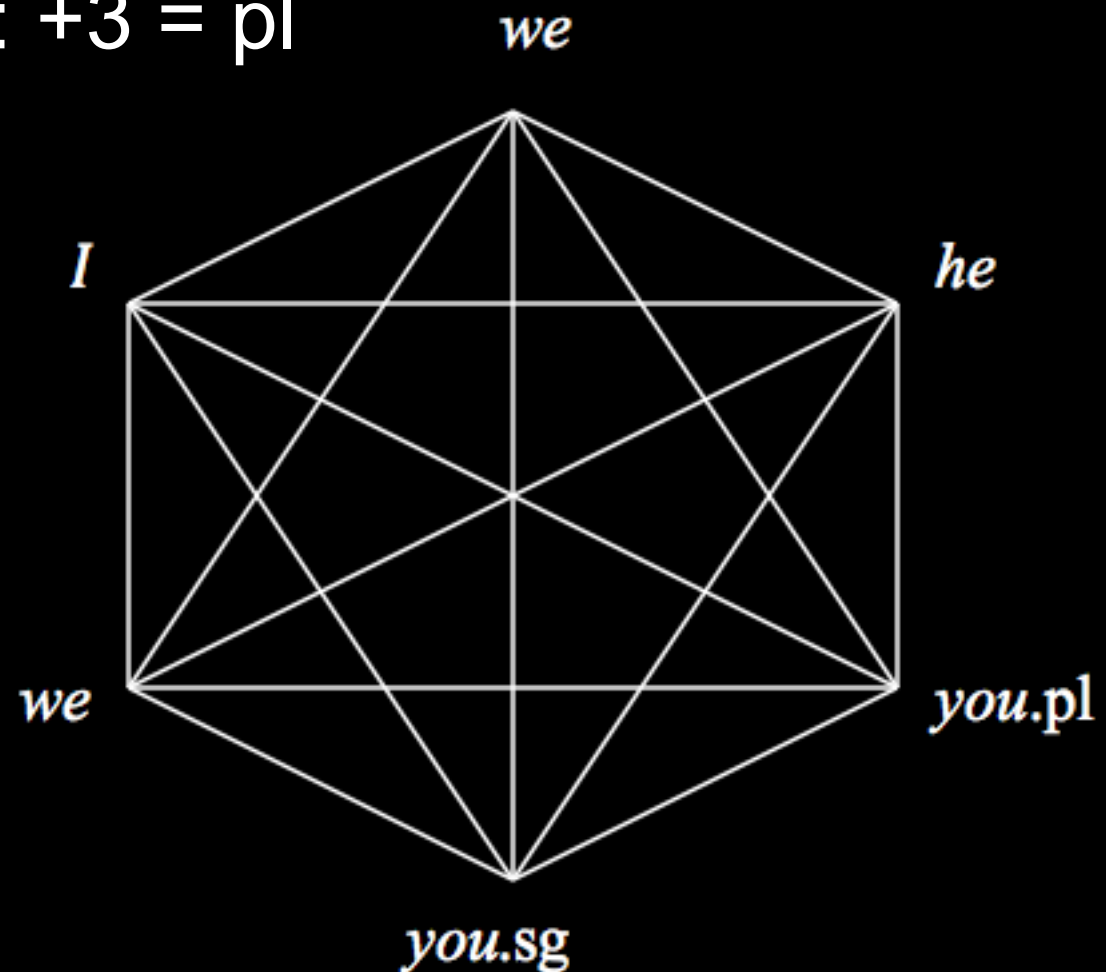

- Many analyses: +3 = pl

e.g:

- 3sg = 3
- 3pl = 3+3
- 2sg = 2
- 2pl = 2+3

- O & U are lexicalised

- Semantically:
 - 1st, 2nd, 3rd person: inherently deictic (Béjar 2003)
 - pl: never defined as deictic (e.g. Harbour 2008, Corbett 2004)

- Morphologically:
 - IF 3rd = pl THEN expectation:
lgs with same morpheme for pl as for 3rd

	sg	pl	Tümpisa Shoshone		
incl		$\alpha\text{-}\bar{\delta}$	INCL		ta- mmü
1	β	$\beta\text{-}\bar{\delta}$	1	nü	nü- mmü
2	γ	$\gamma\text{-}\bar{\delta}$	2	ü	mü- mmü
3	$\bar{\delta}$	$\bar{\delta}$	3	(Demonstratives)	

- IF 3rd = pl THEN expectation:
no 3rd pl needed

- $2+3 \neq \text{hr} + 1 \text{ other}$
- $2+3 = \text{hr} + 1 \text{ or more others}$
- $+3 = +3 / +3 + 3' / +3 + 3' + 3'' / \dots$
- $3 = 3 / 3+3' / 3+3'+3'' / \dots$

- Conclusion:
 - 3rd person: non-participant
 - Plural: + associates

Unlexicalised O & U

***SP and NON-PART**

3. Conclusion

- The Concept Formation Constraint can be applied to person

Resulting in:

- Inclusive is the only complex person
→ Mereological sum in I-corner

Questions?
