## Borer's Generalisation (Borer 2014: 11)

Categorially marked forms in English may not undergo a (phonologically) unmarked noun-verb alternation.

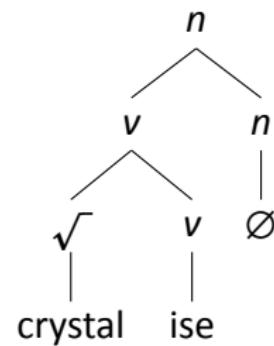

- (5)      a. a salutation                          b. \*to salutation  
              an arrival                                  \*to arrival

Conclusion

# Conclusion

- ▶ Conversion can be explained (without recourse to zero elements) by means of nanosyntactic phrasal spellout, and Superset Principle logic
- ▶ Polycategorial suffixes in English and Dutch show a behaviour that agrees well with the predictions of the model
- ▶ Selection restrictions and root-imposed categorial restrictions can be accounted for by means of pointers
