

# On nominal and multiheaded comparatives

Winfried Lechner

National and Kapodistrian University of Athens

In this talk, I will (i) compare three different structures for degree phrases; (ii) argue that a modernized version of a generalized quantifier analysis of attributive comparatives (*Mary read a longer book than Bill*) is compatible with one of these analytical options only, and (iii) propose a new account of for multi-headed subcomparatives (*More men than women smoke*). Time permitting, I will address a new generalization about subcomparatives.
