## 1 INTRODUCTION

**Playing field:** the syntax (and interpretation, and morphology) of stative passives:

- (1) a. The door is open- ed.  
 b. I porta ine aniy- men- i.  
 the.NOM door.NOM be.3SG  $\sqrt{\text{OPEN}}$  PTCP F.NOM  
 ‘The door is opened.’

These often taken to embed a phrasal verbal structure, one that can be as big as (2):  
 (e.g. Alexiadou & Anagnostopoulou 2008; Alexiadou, Anagnostopoulou, & Schäfer 2015; Anagnostopoulou 2003; Anagnostopoulou & Samioti 2014; Bruening 2014)

(2) *Stative passive à la Phrasal Layering*

**The broad claim of (2):** stative passive = stativized eventive passive, *modulo* independent properties of stativity.

\*This work has benefitted greatly from discussions with David Embick, Julie Anne Legate, Martin Salzmann, Florian Schwarz, and Elena Anagnostopoulou. For helpful feedback, I also thank Luke Adamson, Johanna Benz, Maša Bešlin, and Alexandros Kalomoiros, and the participants of Penn’s SyntaxLab. I also thank Yiannis Dakoumis, Efe Galitsou, Alexandros Kalomoiros, and Konstantinos Paparounas for lending their judgments. All errors are mine.

**Greek** has been the poster child for this type of analysis since Anagnostopoulou (2003), owing to examples like (3):

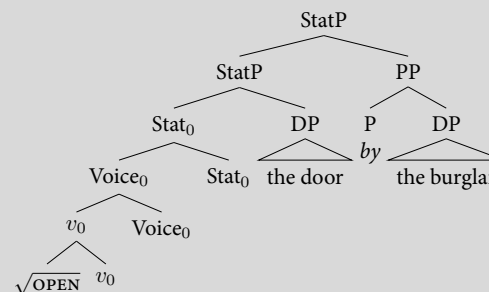

- (3) I porta ine aniy- meni viea / me losto / apo ton ðiarikti.  
 the door is  $\sqrt{\text{OPEN}}$  PTCP violently with crowbar from the burglar  
 ‘The door is opened violently/with a crowbar/by the burglar.’

**Today:** Examine modification beyond agent-oriented modifiers.

- Wide-ranging *mismatches* between eventive and stative passives in Greek seem to speak against (2)...
- ...and in favor of a *complex head analysis* of the type in (4).

(cf. Embick 2021, and Wood 2021 for nominalizations)

(4)

This structure necessitates *delayed saturation*, which presupposes a dissociation between semantic and syntactic argument introduction.

(e.g. Myler 2016; Wood 2014).

## 2 PRELIMINARIES

Greek uses special participial morphology on stative passives:

- (5) **psi- men- o kreas**  
 $\sqrt{\text{ROAST}}$  PTCP N meat  
 ‘roasted meat’ (meat that has undergone a roasting event)

Importantly, participial morphology is never employed in eventive passives:  
 (see Paparounas to appear for details on Greek verbal morphology)

- (6) a. **To kreas psi- θ- ik- e.**  
 the.NOM meat.NOM  $\sqrt{\text{ROAST}}$  PFV.NACT PST 3SG  
 ‘The meat was roasted.’ *‘aorist’*
- b. **To kreas eçi psi- θi.**  
 the.NOM meat.NOM have.3SG  $\sqrt{\text{ROAST}}$  PFV.NACT.PFV  
 ‘The meat has been roasted.’ *‘perfect’*

There is also a participle in *-t-*, lacking event implications; this talk will focus on *-men-*.

- (7) **psi- t- o kreas**  
 $\sqrt{\text{ROAST}}$  PTCP N meat  
 ‘roast meat’ (a type of meat)

The basic analysis in previous work, abstracting away from certain finer distinctions for now:

(see Anagnostopoulou 2003; 2016; Anagnostopoulou and Samioti 2013; 2014; Alexiadou et al. 2015: ch. 5)

Henceforth: focus on *-men-* statives, contrasting them with eventive passives.

## 3 MISMATCHES: STATIVE ≠ EVENTIVE PASSIVE

### 3.1 REFLEXIVIZATION

Greek verbs can be reflexivized by means of *afto-*, which goes hand-in-hand with Nonactive morphology.

(Alexiadou 2014a; Embick 1998; 2004; Paparounas in press-a; in press-b; Rivero 1992; Spathas, Alexiadou, & Schäfer 2015; Tsimpli 1989; Zombolou 2004)

- (9) a. **Simfona me ti miθologia, afti i θeotita**  
 according.to with the mythology this.NOM the.NOM deity.NOM  
**ðimiuryi- s- e ton eafto tis apo to miðen.**  
 $\sqrt{\text{CREATE}}$  PFV.ACT 3SG the.ACC self.ACC her from the zero  
 ‘According to mythology, this deity created itself out of nothing.’
- b. **Simfona me ti miθologia, afti i θeotita afto-**  
 according.to with the mythology this.NOM the.NOM deity.NOM REFL  
**ðimiuryi- θ- ik- e apo to miðen.**  
 $\sqrt{\text{CREATE}}$  PFV.NACT PST.NACT 3SG from the zero  
 ‘According to mythology, this deity self-created out of nothing.’

Similarly with reciprocals and *alilo-*:

- (10) a. **I Maria ke o Janis ipostiriz- un**  
 the.NOM Mary.NOM and the.NOM John.NOM support 3PL.ACT  
**o enas ton alo.**  
 the.NOM one.NOM the.ACC other.ACC  
 ‘Mary and John support each other.’
- b. **I Maria ke o Janis alilo- ipostiriz-**  
 the.NOM Mary.NOM and the.NOM John.NOM RECIP  $\sqrt{\text{SUPPORT-}}$   
**onde.**  
 3PL.NACT  
 ‘Mary and John support each other.’

**Assumption:** *afto-/alilo-* attach to passive VoiceP.

(see Spathas et al. 2015, and cf. Paparounas forthcoming for refinements)

- Evidenced widely, including by the following fact:

(12) *Alexiadou's (2014) generalization*

The verbs that can be 'affixally' reflexivized in Greek are all and only the verbs that can be passivized.

**Crucially**, *-men-* stative passives don't tolerate *afto-* reflexivization:<sup>1</sup>

- (13) a. O Janis *afto- katastraf- ik-* e me to poli  
 the.NOM John.NOM REFL  $\sqrt{\text{DESTROY PST.NACT}}$  3SG with the much  
 potō.  
 drink  
 'John destroyed himself from too much drinking.' *eventive*
- b. Toso pu pini, o Yanis ine (*\*afto-*)  
 that.much COMP drink.2SG the.NOM John.NOM be.3SG REFL  
*katestra- men- os.*  
 $\sqrt{\text{DESTROY PTCP NOM}}$   
 'From drinking so much, John is (self-)destroyed.' *stative*
- (14) a. Exondas metan'osi ja tis praksis tu, o  
 having regret.PFV for the action.PL 3SG.M.POSS the.NOM  
 ḡrastis *afto- kataḡikas- ḡ-* ik- e sto  
 perpetrator.NOM REFL  $\sqrt{\text{CONDEMN PFV.NACT PST.NACT}}$  3SG in.the  
 ḡkastirio.  
 court  
 'Having regretted his actions, the perpetrator self-condemned in court.'  
*eventive*
- b. Exondas omolojisi, o ḡrastis ine pleon (*\*afto-*)  
 having confess.3SG the.NOM inmate.NOM be.3SG as.of.now REFL  
*kataḡikas- men- os se isovia kaḡirksi.*  
 $\sqrt{\text{CONDEMN PTCP NOM}}$  to lifelong imprisonment  
 'Having confessed, the perpetrator is now (self-)condemned to life in  
 prison.' *stative*
- (15) a. O Janis *afto- ḡiafimiz-* ete evreos sto  
 the.NOM John.NOM REFL  $\sqrt{\text{ADVERTISE}}$  3SG.NACT widely on.the  
 Instagram.  
 Instagram  
 'John self-advertises widely on Instagram.' *eventive*

<sup>1</sup>*afto-* ostensibly combines with the *-t-* stative in only a handful of formations: *afto-ḡiḡaktos* 'self-taught', *afto-ḡimiurjitos* 'self-made', *afto-eksoristos* 'self-exiled'. These plausibly involve an *anti-assistive* rather than reflexive use of *-t-* ('made without help', rather than 'made self'), paralleling the behavior of *afto-* in (root) nominals; see Paparounas (forthcoming) for more, and cf. Spathas et al. (2015).

- b. Meta apo makroxroni kamban'a, o Janis ine  
 after from long.time campaign the.NOM John.NOM be.3SG  
 pleon evreos (*\*afto-*) ḡiafimiz- men- os sto  
 as.of.now widely REFL  $\sqrt{\text{ADVERTISE PTCP NOM}}$  on.the  
 Instagram.  
 Instagram  
 'After a years-long campaign, John is now widely (self-)advertised on  
 Instagram.' *stative*

Similarly with reciprocal *alilo-*:

- (16) a. Otan rotiḡikan pços itan arxiyos tis  
 when ask.NACT.3PL who.NOM be.PST.3SG leader.NOM the.GEN  
 tromokraticis oryanosis, i ipopti alilo-  
 terrorist.GEN organization.GEN the.NOM.PL suspect.NOM.PL RECIP  
 katiyori- ḡ- ik- an.  
 $\sqrt{\text{ACCUSE PFV.NACT PST 3PL}}$   
 'When asked who was the leader of the terrorist group, the suspects ac-  
 cused each other.' *eventive*
- b. Finally, the expert interrogator managed to turn the suspects' testi-  
 monies against each other.  
 \*I ipopti ine alilo- katiyori- men- i.  
 the.NOM.PL suspect.NOM.PL be.3PL RECIP  $\sqrt{\text{ACCUSE PTCP NOM.PL}}$   
 The suspects are mutually accused.' *stative*
- (17) a. I ḡio iperḡinamis alilo- eksondo- ḡ-  
 the.NOM.PL two superpower.NOM.PL RECIP  $\sqrt{\text{EXTINGUISH PFV.NACT}}$   
 ik- an stin teleftea singrusi.  
 PST.NACT 3PL in.the latest conflict  
 'The two superpowers extinguished each other in the latest conflict.'  
*eventive*
- b. \*I ḡio iperḡinamis ine pleon alilo-  
 the.NOM.PL two superpower.NOM.PL be.3PL from.now.on RECIP  
 eksondo- men- es.  
 $\sqrt{\text{EXTINGUISH PTCP NOM.PL}}$   
 'The two superpowers are now mutually extinguished.' *stative*
- (18) a. Se afto to katastima i pelates alilo- ekspiret-  
 in this the store the.NOM.PL customer.NOM.PL RECIP  $\sqrt{\text{SERVICE}}$   
 unde.  
 3PL.NACT  
 'In this store, customers assist each other.' *eventive*

- b. I pelates ðe mas xriazonde -- ine  
 the.NOM.PL customer.NOM.PL NEG 1PL.ACC need.NACT.3PL – be.3PL  
 iði (\*allilo-) eksipireti- men- i.  
 already RECIPTCP PL  
 ‘The customers don’t need us - they are already mutually assisted.’ *stative*

- If the stative and eventive passive both contain VoiceP...
- ...then why no reflexivization in the stative?

### 3.2 ALMOST

Well-known ambiguity between *counterfactual* and *scalar* readings: (McCawley 1971)

- (19) I x<sup>l</sup>onati sçeðon efaje to milo.  
 the.NOM Snow.White almost eat.PST.3SG the.ACC apple.ACC  
 ‘Snow White almost ate the apple.’  
 ✓ ‘Snow White almost finished eating the apple.’ *scalar*  
 ✓ ‘It almost happened that Snow White ate the apple.’ *counterfactual*

Accomplishment verbs continue to license the ambiguity in the **eventive** passive:<sup>2</sup>

- (20) To milo sçedon fayothiapo tin x<sup>l</sup>onati...  
 the.NOM apple.NOM almost eat.NACT.PST.3SG from the Snow.White  
 ‘The apple was almost eaten by Snow White...’  
 a. ... Afise mono ena komataki.  
 leave.PST.3SG only one.ACC piece.DIM.ACC  
 ‘She left only a little piece.’ *scalar-facilitating*  
 b. ... Eftixos, o griniaris ti stamatise prin  
 thankfully the.NOM Grouchy.NOM 3SG.F.ACC stop.PST.3SG before  
 kataferi na to dagosi.  
 manage.3SG COMP 3SG.N.ACC bite.3SG  
 ‘Thankfully, Grouchy stopped her before she managed to take a bite.’  
*counterfactual-facilitating*

NB also in (plu)perfects:

- (21) To milo sçedon içe fayothi apo tin x<sup>l</sup>onati...  
 the.NOM apple.NOM almost have.PST.3SG eat.PFV from the Snow.White  
 ‘The apple had almost been eaten by Snow White...’  
 a. ... otan i vasilisa ti fonakse ke  
 when the.NOM queen.NOM 3SG.F.ACC call.PST.3SG and  
 afise to telefteo komati.  
 leave.PST.3SG the.ACC last.ACC piece.ACC  
 ‘when the queen called her and she left the last piece.’  
 b. ... otan o griniaris ti stamatise prin  
 thankfully the.NOM Grouchy.NOM 3SG.F.ACC stop.PST.3SG before  
 kan to dagosi.  
 even 3SG.N.ACC bite.PFV.3SG  
 ‘when Grouchy stopped her before she even took a bite.’

Crucially, stative passives only ever yield the scalar reading: (cf. Nissenbaum 2018)

- (22) a. To milo ine sçeðon fayomen- o.  
 the.NOM apple.NOM be.3SG almost  $\sqrt{\text{EAT}}$  PTCP N  
 ‘The apple is almost eaten.’  $\times$ counterfactual ✓scalar  
 b. To milo itan sçeðon fayomen- o.  
 the.NOM apple.NOM be.PST.3SG almost  $\sqrt{\text{EAT}}$  PTCP 3SG  
 ‘The apple was almost eaten.’  $\times$ counterfactual ✓scalar

Thus, in counterfactual-reading-favoring contexts, negating the event produces a contradiction with the stative, but not the eventive, passive:

- (23) [In a Hunger Games-esque competitive deathmatch, a cunning player leaves out a poisoned apple for their hungry competitors.]  
 a. To ðilitirias- men- o milo sçeðon fayothiapo  
 the.NOM  $\sqrt{\text{POISON}}$  PTCP N.NOM apple.NOM almost eat.NACT.PST.3SG  
 apo polus pextes, ala eftixos kanis tus ðen  
 from many player.PL but thankfully no-one.NOM 3PL.POSS NEG  
 to efaje telika.  
 3SG.N.ACC eat.PST.3SG ultimately  
 ‘The poisoned apple was almost eaten by many players, but thankfully none of them ate it in the end.’  
 b. To ðilitirias- men- o milo sçeðon içe  
 the.NOM  $\sqrt{\text{POISON}}$  PTCP N.NOM apple.NOM almost have.PST.3SG  
 fayothiapo polus pextes, ala eftixos kanis tus  
 eat.PFV from many player.PL but thankfully no-one.NOM 3PL.POSS  
 ðen to efaje telika.  
 NEG 3SG.N.ACC eat.PST.3SG ultimately

<sup>2</sup>Some speakers appear not to accept *sçeðon* in the eventive passive (Elena Anagnostopoulou, p.c.); such examples are grammatical for me and my consultants.

‘The poisoned apple was almost eaten by many players, but thankfully none of them ate it in the end.’

- c. To ðilitirias- men- o milo itan sçeðon faço-  
 the.NOM √POISON PTCP N.NOM apple.NOM be.PST.3SG almost √EAT  
 men- o apo polus pextes, #ala eftixos kanis ðen  
 PTCP N.NOM from many player.PL but thankfully no-one.NOM NEG  
 to içe fai.  
 3SG.N.ACC have.PST.3SG eat.PST.3SG  
 ‘The poisoned apple was almost eaten, but thankfully no-one had eaten it.’

Further evidence: **Activity verbs** license only the counterfactual reading in eventive passives:

- (26) a. O Janis sçeðon klotsise ti bala.  
 the.NOM John.NOM almost kick.PST.3SG the.ACC ball.ACC  
 ‘John almost kicked the ball.’ ✓counterfactual ✗scalar  
 b. I bala sçeðon klotsiðike apo to Jani.  
 the.NOM ball.NOM almost kick.NACT.3SG from the John  
 ‘The ball was almost kicked by John.’ ✓counterfactual ✗scalar

Since stative passives lack this reading by default, *almost*-modified stative passives of activity verbs are just odd:

- (27) #I bala ine / itan sçeðon klotsi- men- i.  
 the.NOM ball.NOM be.3SG be.PST.3SG almost √KICK PTCP F.NOM

The deviance of (27) is not just due to √KICK lacking a good target state, witness two facts.

1. Parallel to activity verbs are accomplishments modified by a near-synonymous modifier, *para-liyo* (lit. ‘but-little’), which only ever gives the counterfactual reading:

- (28) a. O Janis paraliyo efaje to milo.  
 the.NOM John.NOM nearly eat.PST.3SG the.ACC apple.ACC  
 ‘John nearly ate the apple.’ ✓counterfactual ✗scalar  
 b. To milo paraliyo façoðike apo to Jani.  
 the.NOM apple.NOM almost eat.NACT.PST.3SG from the John  
 ‘The apple was nearly eaten by John.’ ✓counterfactual ✗scalar

Again, *paraliyo* -modified statives are odd, even with accomplishments (which otherwise give perfect target states):

- (29) #To milo ine / itan paraliyo faço- men- o.  
 the.NOM apple.NOM be.3SG be.PST.3SG nearly √EAT PTCP N  
 ‘The apple is all but eaten.’

2. Target states of activities are facilitated in ‘job-is-done’ contexts. Using a context suggested by Dave Embick (p.c.):

- (30) [Our job in the football factory is to test the durability of all newly produced footballs by kicking them.]  
 a. The footballs are kicked, let’s go home.

- If the *almost* ambiguity is structural, derived from whether *almost* attaches above vs below Voice...

(Rapp & von Stechow 1999)

- (24) a. Counterfactual

≈ ‘it was almost the case that PP brought it about that VP’

- b. Scalar

≈ ‘PP brought it about that almost VP’

- ...then the layering analysis mispredicts the existence of a high attachment site for *almost* in the stative.
- On the complex head analysis, the first phrasal projection that *almost* can attach to is the state.

- (25)

- b. I bales ine klotsi- menes, pame na  
 the.NOM.PL ball.NOM.PL be.3PL  $\sqrt{\text{KICK}}$  PTCP go.1PL COMP  
 fiyume.  
 leave.1PL  
 ‘The balls are kicked, let’s go home.’

But even in these contexts, the counterfactual reading isn’t natural:

- (31) a. #The last few balls were almost kicked, but we got fed up and went home.  
*NB intended as stative!*  
 b. #I teleftees bales itan sçeðon klotsi-  
 the.NOM.PL last.NOM.PL ball.NOM.PL be.PST.3PL almost  $\sqrt{\text{KICK}}$   
 menes, ala vareθikame ke fiyame.  
 PTCP but become.bored.PST.1PL and leave.PST.1PL  
 ‘The last balls were almost kicked, but we got bored and left.’

### 3.3 IDIOMS

- *Caveat*: good passivizable idioms are hard to find in Greek.
- But for the ones that do exist, eventives and statives behave differently.

First, livers and noises:

- (32) I θorivi mu exun kopsi ta ipata.  
 the noises 1SG.GEN have.3PL cut.PFV the livers  
 Literal: ‘The noises have cut the livers to my detriment.’  
 Idiomatic: ‘The noises have scared me to death.’

In the eventive passive, the idiomatic reading survives:

- (33) Mu exun kopi ta ipata apo tus θorivus.  
 1SG.GEN have.3PL cut.PASS.PFV the livers from the noises  
 ‘I have been scared to death by the noises.’

But in the statives, things are different:

- (34) #Mu ine ko- mena ta ipata (apo tus θorivus).  
 1SG.GEN be.3PL  $\sqrt{\text{CUT}}$  PTCP the livers from the noises  
 Intended: ‘I am scared to death (by the noises).’

NB not just about statives not tolerating GEN maleficiaries:

- (35) Mu ine pez- meno to iθiko.  
 1SG.GEN be.3SG  $\sqrt{\text{FALL}}$  PTCP the morale  
 ‘My morale is low.’

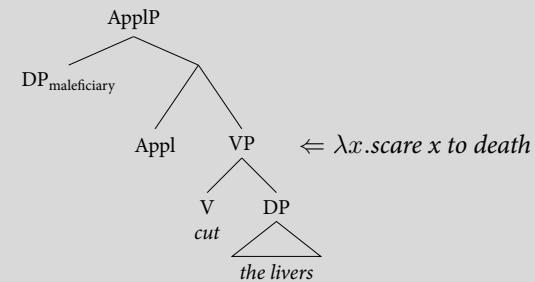

Similarly with fish and lips:<sup>3</sup>

- (36) a. Mu epsise to psari sta xili.  
 1SG.GEN roast.PST.3SG the fish on.the lips  
 ‘S/he tormented me’ (lit. ‘S/he roasted the fish on my lips.’)  
 b. Mu exi psiθi to psari sta xili.  
 1SG.GEN have.3SG roast.PASS.PFV the fish on.the lips  
 ‘I have been tormented.’  
 c. #Mu ine psi- meno to psari sta xili.  
 1SG be.3SG  $\sqrt{\text{ROAST}}$  PTCP the fish on.the lips  
 Intended: ‘I am in a tormented state.’

#### The argument:

- If these verb-object idioms target full VPs...

(37)

- ...then stative passives seem to lack full VPs.

<sup>3</sup>For one of my consultants, (36b) is not clearly well-formed; but the same consultant nonetheless notes that (36c) is worse than (36b).

## 4 ANALYSIS

Three corners of the grammar of Greek where stative and eventive passives diverge:

- ‘Affixal’ reflexivization
- The *almost* ambiguity
- Verb-object idioms

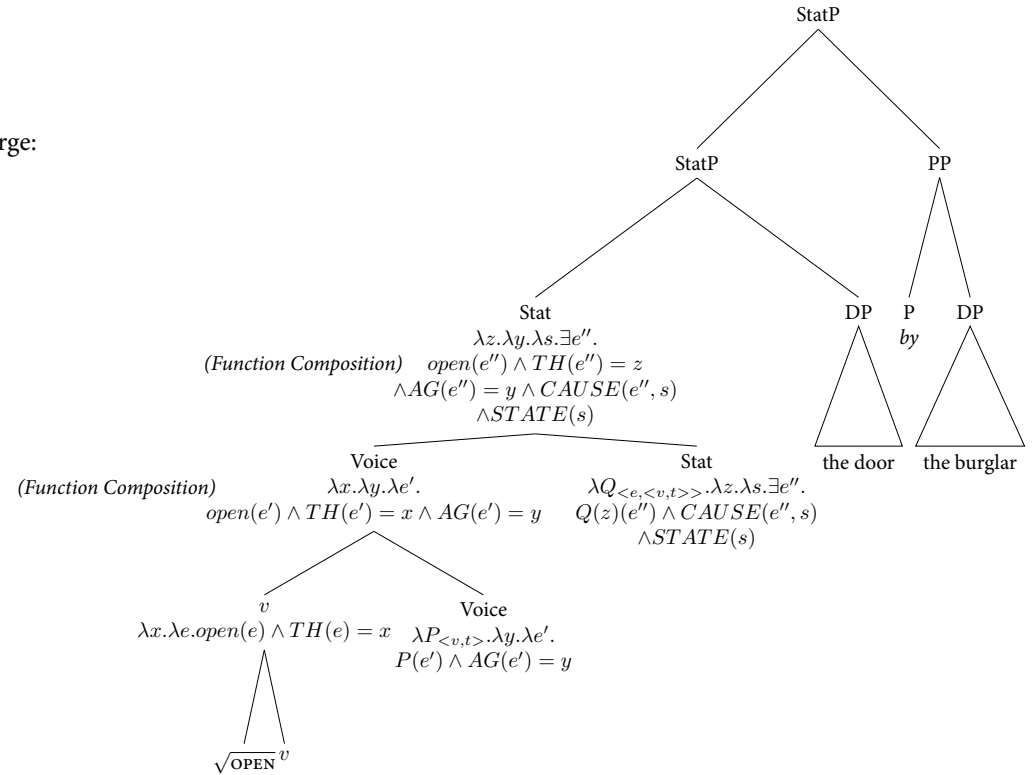

None of these are expected if the stative contains the eventive; a complex head analysis, though, accommodates them easily.

And yet:

(38) I porta ine aniy- meni via / me losto / apo ton ðiarikti.  
 the door is  $\sqrt{\text{OPEN}}$  PTCP violently with crowbar from the burglar  
 ‘The door is opened violently/with a crowbar/by the burglar.’

**Basic proposal:** Voice is present, and contributes agentive semantics, but no argument to saturate it.

(39) *Complex head with delayed saturation*

**Central intuition:** The roles introduced by *v* and Voice are saturated higher up in the structure. (Kastner 2017; Myler 2016; Wood 2014; 2015; Wood & Marantz 2017)

**The good:**

- We can have our cake, and eat it too.

**The not-so-good:**

- We owe an account of what goes wrong when we fail to adjoin the DPs (particularly the theme) higher up.
- Stat does some work passing up an argument.

A theory with ‘syntactically assigned’  $\theta$ -roles would face issues in this type of structure: no locality of assignment.

- A  $\theta$ -roles-as-LF-functions view fares better...

- ...and confers the additional advantage of allowing Voice to sometimes be semantically vacuous (see appendix).

## 5 CONCLUSION

If the generalizations here are correct, then Greek stative passives exemplify a situation where agents and themes are arguments of a complex stativized head, not part of a verb phrase.

This follows if:

- Thematic roles are functions introduced by functional heads at LF; which
- need not be saturated by a nominal introduced by the same head.

### APPENDIX A: TARGET AND RESULTANT STATES

A distinction put to the side thus far, from Kratzer (2001), implementing an idea from Parsons (1990):

- (40) a.  $\llbracket \text{Stat}_1 \rrbracket = \lambda P. \lambda s. \exists e. P(s)(e)$  *target state*  
 b.  $\llbracket \text{Stat}_2 \rrbracket = \lambda P. \lambda t. \exists e. P(e) \wedge \tau(e) \leq t$  *resultant state*

The idea:

- (40a) is effectively a kind of resultative; a state resulting from an event
- (40b) is true iff the holder underwent the relevant event at some point in the past.
- (Ultimately we must wonder if these are distinct enough to be given as separate denotations – they will entail each other much of the time, and what seems to be at stake is whether the state holds *at utterance time*...)

'If I throw a ball onto the roof, the target state of this event is the ball's being on the roof, a state that may or may not last for a long time. What I am calling the Resultant-state is different; it is the state of my having thrown the ball onto the roof, and it is a state that cannot cease holding at some later time.'

(Parsons 1990: p. 235)

Kratzer takes it that *immer noch* 'still' teases apart the two types of states, effectively by getting at their (non-)reversibility:

- (41) a. Die Reifen sind (immer noch) aufgepumpt.  
 the.NOM.PL tire.NOM.PL be.3PL still pump.up.PTCP  
 'The tires are (still) pumped up.'
- b. Die Wäsche ist (#immer noch) getrocknet.  
 the.NOM laundry.NOM be.3SG still dry.PTCP  
 'The laundry is (still) dried.'

(Kratzer 2001: pp. 1–2)

Much work since Anagnostopoulou (2003):

- Greek *-men-* forms ambiguous between (40a) and (40b); and...

- (42) a. Ta lastixa ine (akoma) fusko- mena.  
 the.NOM.PL tire.NOM.PL be.3PL still  $\sqrt{\text{INFLATE}}$  PTCP  
 'The tires are (still) inflated.'
- b. Ta ruxa ine (#akoma) steyno- mena.  
 the.NOM.PL clothes.NOM.PL be.3PL still  $\sqrt{\text{DRY}}$  PTCP  
 'The clothes are (still) dried.'

(Alexiadou & Anagnostopoulou 2008: p. 36)

- ...only resultant state *-men-* contains Voice.

- (43) a. Ta lastixa ine (#akoma) fusko- mena apo ti  
 the.NOM.PL tire.NOM.PL be.3PL still  $\sqrt{\text{INFLATE}}$  PTCP from the  
 Maria.  
 Mary  
 'The tires are (still) inflated by Mary.'
- b. Ta ruxa ine (#akoma) steyno- mena me  
 the.NOM.PL clothes.NOM.PL be.3PL still  $\sqrt{\text{DRY}}$  PTCP with  
 to sesuar.  
 the blowdryer  
 'The clothes are (still) dried with the blowdryer.'

(44) *Target state menos*

(45) *Resultant state menos*

A homophony problem:

- If this is really ambiguity, that the two stativizers are realized with the same phonology raises questions.
- To my knowledge, no language realizes resultant and target states differently.
- cf. Wood (2021) for a similar argument on the different readings of nominalizations.

What a ‘Late Interpretation’ account allows for, after Wood (2021):

(46) *Allosemy*

- a.  $[[\text{Voice}]] \Leftrightarrow \lambda P_{\langle v,t \rangle} . \lambda y . \lambda e' .$   
 b.  $\Leftrightarrow \lambda f . f$

- In (39), Voice can be semantically empty.
- Stat will combine with it by Functional Application, without agentive semantics being introduced.
- The putative ambiguity follows, but without homophony, since form and interpretation are determined independently of each other.
- But we still owe a full account of (43)...

But there is a deeper question: *why* does agent introduction correlate with reversibility?

- NB under Alexiadou and Anagnostopoulou (2008) *et seq.*, Stat<sub>2</sub> simply selects Voice.

## APPENDIX B: ATTRIBUTIVE VS PREDICATIVE

- A dimension not explicitly controlled for in previous literature on Greek; it seems to play an important role.
- Generally, attributive position turns out to afford more modification possibilities than predicative...
- ...consistent with the idea that attributive  $\Rightarrow$  more structure.

A few first notes:

### Target states of activities:

(With thanks to Dave Embick, p.c.)

- (47) a. #This ball is violently kicked.  
 b. The violently kicked ball made it all the way to the audience stands.
- (48) a. #Afti i bala ine viea klotsi- meni.  
 this.NOM the.NOM ball.NOM be.3SG violently  $\sqrt{\text{KICK}}$  PTCP  
 ‘This ball is violently kicked.’  
 b. I viea klotsi- meni bala eftase mexri tis  
 the.NOM violently  $\sqrt{\text{KICK}}$  PTCP ball.NOM reach.PST.3SG until the  
 kerciðes.  
 audience.stands  
 ‘The violently kicked ball made it all the way to the audience stands.’

### Licensing the counterfactual reading of *almost*:

- (49) a. This apple is almost eaten.  $\times$ counterfactual  $\checkmark$ scalar  
 b. The almost eaten apple is still lying whole on the table.

cf. reduced relatives:

- (50) a. #These roads are almost taken.  
 b. The roads almost taken always haunt us.
- (51) a. Afto to milo ine sçeðon faço- meno.  
 this.NOM the.NOM apple.NOM be.3SG almost  $\sqrt{\text{EATEN}}$  PTCP  
 ‘This apple is almost eaten.’  $\times$ counterfactual  $\checkmark$ scalar  
 b. ?To sçeðon faço- meno milo ine akoma olokliro.  
 the.NOM almost  $\sqrt{\text{EATEN}}$  PTCP apple.NOM be.3SG still whole  
 ‘The almost eaten apple is still whole.’

Recall also *paraliyo* from the main text:

- (52) #To milo ine paraliyo faço- men- o.  
 the.NOM apple.NOM be.3SG nearly  $\sqrt{\text{EAT}}$  PTCP 3SG  
 ‘The apple is all but eaten.’
- (53) To paraliyo faço- meno milo ine sto trapezi --  
 the.NOM nearly  $\sqrt{\text{EAT}}$  PTCP apple.NOM be.3SG on.the table  
 eftixos ðen to efaye kanis telika.  
 thankfully NEG 3SG.N.ACC eat.PST.3SG nobody.NOM finally  
 ‘The almost eaten apple is on the table – thankfully nobody ate it after all.’
