

A unified account of Dutch adjectival and verbal equatives

Lena Heynen
lena.heynen@kuleuven.be

KULeuven, CRISSP

Grote Taaldag
3 february, Utrecht

Outline

1. Introduction

2. Data

3. Syntax and semantics of Dutch equatives

3.1 Syntax of Dutch equatives

3.2 Semantics of Dutch equatives

4. Same structure for *zoals* and *zo...als*

5. Same structure for verbal and adjectival equatives

6. Open Questions

6.1 Postverbal *zoals*

6.2 Fronting of *zo*

6.3 Fronting of *als*-clause

7. Conclusions

Introduction

- ▶ Equatives are expressions of equality.

Introduction

- ▶ Equatives are expressions of equality.
- ▶ They can use two functional elements: a parameter marker (PM) and a standard marker (STM).

Introduction

- ▶ Equatives are expressions of equality.
- ▶ They can use two functional elements: a parameter marker (PM) and a standard marker (STM).

(1) John is as.PM tall as.STM Karen.

Introduction

- ▶ Equatives are expressions of equality.
- ▶ They can use two functional elements: a parameter marker (PM) and a standard marker (STM).

(1) John is as.PM tall as.STM Karen.

- ▶ Haspelmath & Buchholz (H & B) (1998) state that there is a cross-linguistic tendency to have no parameter marker present in verbal equatives.

Introduction

- ▶ Equatives are expressions of equality.
- ▶ They can use two functional elements: a parameter marker (PM) and a standard marker (STM).

(1) John is as.PM tall as.STM Karen.

- ▶ Haspelmath & Buchholz (H & B) (1998) state that there is a cross-linguistic tendency to have no parameter marker present in verbal equatives.
- ▶ English follows this tendency.

Introduction

- ▶ Equatives are expressions of equality.
- ▶ They can use two functional elements: a parameter marker (PM) and a standard marker (STM).

(1) John is as.PM tall as.STM Karen.

- ▶ Haspelmath & Buchholz (H & B) (1998) state that there is a cross-linguistic tendency to have no parameter marker present in verbal equatives.
- ▶ English follows this tendency.
 - ▶ Adjectival equatives have a Parameter Marker (PM).

Introduction

- ▶ Equatives are expressions of equality.
- ▶ They can use two functional elements: a parameter marker (PM) and a standard marker (STM).

(1) John is as.PM tall as.STM Karen.

- ▶ Haspelmath & Buchholz (H & B) (1998) state that there is a cross-linguistic tendency to have no parameter marker present in verbal equatives.
- ▶ English follows this tendency.
 - ▶ Adjectival equatives have a Parameter Marker (PM).
 - ▶ Verbal equatives (similatives) do not.

Introduction

- ▶ Equatives are expressions of equality.
- ▶ They can use two functional elements: a parameter marker (PM) and a standard marker (STM).

(1) John is as.PM tall as.STM Karen.

- ▶ Haspelmath & Buchholz (H & B) (1998) state that there is a cross-linguistic tendency to have no parameter marker present in verbal equatives.
- ▶ English follows this tendency.
 - ▶ Adjectival equatives have a Parameter Marker (PM).
 - ▶ Verbal equatives (similatives) do not.

(2) John (*as.PM) danced as/like.STM Karen.

Introduction

- ▶ Dutch adjectival equatives have both a PM and a STM (as expected).

Introduction

- ▶ Dutch adjectival equatives have both a PM and a STM (as expected).

(3) Jan is zo groot als Karen.
John is so.PM tall as.STM Karen
'John is as tall as Karen.'

Introduction

- ▶ Dutch adjectival equatives have both a PM and a STM (as expected).

(3) Jan is zo groot als Karen.
John is so.PM tall as.STM Karen
'John is as tall as Karen.'

- ▶ Dutch verbal equatives use *zoals*.

Introduction

- ▶ Dutch adjectival equatives have both a PM and a STM (as expected).

(3) Jan is zo groot als Karen.
John is so.PM tall as.STM Karen
'John is as tall as Karen.'

- ▶ Dutch verbal equatives use *zoals*.

(4) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John has danced like Karen.'

Introduction

- ▶ Dutch adjectival equatives have both a PM and a STM (as expected).

(3) Jan is zo groot als Karen.
John is so.PM tall as.STM Karen
'John is as tall as Karen.'

- ▶ Dutch verbal equatives use *zoals*.

(4) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John has danced like Karen.'

- ▶ H & B (1998) consider Dutch to be in line with the tendency, because they analyse *zoals* as an atomic STM.

Introduction

- ▶ Dutch adjectival equatives have both a PM and a STM (as expected).

(3) Jan is zo groot als Karen.
John is so.PM tall as.STM Karen
'John is as tall as Karen.'

- ▶ Dutch verbal equatives use *zoals*.

(4) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John has danced like Karen.'

- ▶ H & B (1998) consider Dutch to be in line with the tendency, because they analyse *zoals* as an atomic STM.
"some languages [such as Dutch] prefer to add the demonstrative correlate 'so' in front of the 'how' word, [...] this strategy **cannot be called parameter marking** because the demonstrative correlate is **not associated with the parameter** but directly precedes the standard marker."

Introduction

- ▶ Dutch adjectival equatives have both a PM and a STM (as expected).

(3) Jan is zo groot als Karen.
John is so.PM tall as.STM Karen
'John is as tall as Karen.'

- ▶ Dutch verbal equatives use *zoals*.

(4) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John has danced like Karen.'

- ▶ H & B (1998) consider Dutch to be in line with the tendency, because they analyse *zoals* as an atomic STM.
"some languages [such as Dutch] prefer to add the demonstrative correlate 'so' in front of the 'how' word, [...] this strategy **cannot be called parameter marking** because the demonstrative correlate is **not associated with the parameter** but directly precedes the standard marker."
▶ I argue that Dutch does not follow H & B's (1998) tendency.

Introduction

- ▶ I argue that *zoals* can be composed into the PM *zo* and the STM *als*.

- ▶ I argue that *zoals* can be composed into the PM *zo* and the STM *als*.
 - ▶ Moreover, Dutch can express verbal equatives with *zo...als*.
- (5) Jan heeft (net) zo.PM gedanst als.STM Karen.
John has just so danced as Karen
'John has danced just like Karen.'

- ▶ I argue that *zoals* can be composed into the PM *zo* and the STM *als*.
- ▶ Moreover, Dutch can express verbal equatives with *zo...als*.
 - (5) Jan heeft (net) zo.PM gedanst als.STM Karen.
John has just so danced as Karen
'John has danced just like Karen.'
- ▶ I argue that *zo...als* and *zoals* verbal equatives have the same underlying syntactic structure.

- ▶ I argue that *zoals* can be composed into the PM *zo* and the STM *als*.
- ▶ Moreover, Dutch can express verbal equatives with *zo...als*.

(5) Jan heeft (net) zo.PM gedanst als.STM Karen.
John has just so danced as Karen
'John has danced just like Karen.'

- ▶ I argue that *zo...als* and *zoals* verbal equatives have the same underlying syntactic structure.
- ▶ I argue that this syntactic structure is the same as that of adjectival *zo...als*-equatives.

Outline

4. Same structure for *zoals* and *zo...als*
5. Same structure for verbal and adjectival equatives
6. Open Questions
 - 6.1 Postverbal *zoals*
 - 6.2 Fronting of *zo*
 - 6.3 Fronting of *als*-clause
7. Conclusions

Adjectival equatives

- (6) Jan is zo groot als Karen.
John is so tall as Karen
'John is as tall as Karen.'

Adjectival equatives

- (6) Jan is zo groot als Karen.
John is so tall as Karen
'John is as tall as Karen.'
- (7) *Jan is zoals Karen groot.
John is so.as Karen tall
'John is as tall as Karen.'

Adjectival equatives

- (6) Jan is zo groot als Karen.
John is so tall as Karen
'John is as tall as Karen.'
- (7) *Jan is zoals Karen groot.
John is so.as Karen tall
'John is as tall as Karen.'
- (8) *Jan is groot zoals Karen.
John is tall so.as Karen
'John is as tall as Karen.'

Adjectival equatives

- (6) Jan is zo groot als Karen.
John is so tall as Karen
'John is as tall as Karen.'
- (7) *Jan is zoals Karen groot.
John is so.as Karen tall
'John is as tall as Karen.'
- (8) *Jan is groot zoals Karen.
John is tall so.as Karen
'John is as tall as Karen.'

► Note that the *zoals*-word order is possible with an intonational pause.

Adjectival equatives

- (6) Jan is zo groot als Karen.
John is so tall as Karen
'John is as tall as Karen.'
- (7) *Jan is zoals Karen groot.
John is so.as Karen tall
'John is as tall as Karen.'
- (8) *Jan is groot zoals Karen.
John is tall so.as Karen
'John is as tall as Karen.'

- ▶ Note that the *zoals*-word order is possible with an intonational pause.
- ▶ In that case the reading is evaluative.

Adjectival equatives

- (6) Jan is zo groot als Karen.
John is so tall as Karen
'John is as tall as Karen.'
- (7) *Jan is zoals Karen groot.
John is so.as Karen tall
'John is as tall as Karen.'
- (8) *Jan is groot zoals Karen.
John is tall so.as Karen
'John is as tall as Karen.'

- ▶ Note that the *zoals*-word order is possible with an intonational pause.
- ▶ In that case the reading is evaluative.
- ▶ I will only focus on adjectival equatives with a degree reading.

- (9) Jan heeft zo gedanst als Karen.
John has so danced as Karen
'John has danced like Karen.'

Verbal equatives

- (9) Jan heeft zo gedanst als Karen.
John has so danced as Karen
'John has danced like Karen.'
- (10) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John danced like Karen.'

Verbal equatives

- (9) Jan heeft zo gedanst als Karen.
John has so danced as Karen
'John has danced like Karen.'
- (10) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John danced like Karen.'
- (11) Jan heeft gedanst zoals Karen.
John has danced so.as Karen
'John has danced like Karen.'

7. Conclusions

Syntax of Dutch equatives

Adjectival equatives

Syntax of Dutch equatives

Adjectival equatives

- ▶ *zo* is a degree head, like *-er* in comparatives. (a.o. Corver 1990; Merchant 2011; Vela-Plo 2020; Fabregas 2020)

Syntax of Dutch equatives

Adjectival equatives

- ▶ *zo* is a degree head, like *-er* in comparatives .
- ▶ The Degree Phrase is an adjunct of the adjective. (Borsley 1981; Larson 1988; Heim 2000; Kennedy 2002; Mendia 2020)

Syntax of Dutch equatives

Adjectival equatives

- ▶ *zo* is a degree head, like *-er* in comparatives.
- ▶ The Degree Phrase is an adjunct of the adjective.
- ▶ *zo* takes the *als*-clause as its complement, just like *-er* taking the *dan*-clause as its complement. (Bresnan 1973; Lechner 1999, 2004; 2004; Bhatt & Pancheva 2004; Pancheva 2006; Mendia 2020)

Syntax of Dutch equatives

Verbal equatives

Syntax of Dutch equatives

Verbal equatives

- ▶ *zo* is a manner adverb, which is a VP-adverb (Barbiers 2018).

Syntax of Dutch equatives

Verbal equatives

- ▶ *zo* is a manner adverb, which is a VP-adverb (Barbiers 2018).
- ▶ *zo* takes the *als*-clause as its complement.

Outline

1. Introduction
2. Data
3. Syntax and semantics of Dutch equatives
 - 3.1 Syntax of Dutch equatives
 - 3.2 Semantics of Dutch equatives
4. Same structure for *zoals* and *zo...als*
5. Same structure for verbal and adjectival equatives
6. Open Questions
 - 6.1 Postverbal *zoals*
 - 6.2 Fronting of *zo*
 - 6.3 Fronting of *als*-clause
7. Conclusions

Semantics of Dutch equatives

Dutch adjectival equatives always have a degree reading.

Semantics of Dutch equatives

Dutch adjectival equatives always have a degree reading.

- (12) Jan is zo groot als Karen.
John is so tall as Karen
'John is as tall as Karen.'

Dutch adjectival equatives always have a degree reading.

- (12) Jan is zo groot als Karen.
John is so tall as Karen
'John is as tall as Karen.'

(13) Continuations

- a. #Jan is 1m80 en Karen 1m85.
John is 1m80 and Karen 1m85
'John's height is 1m80 and Karen's is 1m85.' (evaluative)
- b. Jan is 1m68 en Karen ook.
John is 1m68 and Karen too
'John's height is 1m68 and Karen is 1m68 too.'

Semantics of Dutch equatives

Dutch verbal equatives always have a manner reading.

Semantics of Dutch equatives

Dutch verbal equatives always have a manner reading.

- (14) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John danced in the same way as Karen.'

Semantics of Dutch equatives

Dutch verbal equatives always have a manner reading.

(14) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John danced in the same way as Karen.'

(15) Continuations for verbal equative

- a. Namelijk in cirkels.
namely in circles
'Namely in circles.'
- b. #Namelijk vijf keer.
namely five times
'Namely five times.'

Semantics of Dutch equatives

Dutch verbal equatives always have a manner reading.

(14) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John danced in the same way as Karen.'

(15) Continuations for verbal equative

a. Namelijk in cirkels.
namely in circles
'Namely in circles.'

b. #Namelijk vijf keer.
namely five times
'Namely five times.'

- ▶ The available readings are thus not determined by *zo* and *als* as they occur in both constructions.

Semantics of Dutch equatives

Dutch verbal equatives always have a manner reading.

- (14) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John danced in the same way as Karen.'
- (15) Continuations for verbal equative
- a. Namelijk in cirkels.
namely in circles
'Namely in circles.'
 - b. #Namelijk vijf keer.
namely five times
'Namely five times.'
- ▶ The available readings are thus not determined by *zo* and *als* as they occur in both constructions.
- ▶ The available reading directly correlates with the category with which *zo...als* combines.

Semantics of Dutch equatives

- ▶ In joint work Jianrong Yu and I argue that *zo* is a proform introducing kinds. (following Anderson & Morzycki 2015)

Semantics of Dutch equatives

- ▶ In joint work Jianrong Yu and I argue that *zo* is a proform introducing kinds. (following Anderson & Morzycki 2015)
- ▶ $\llbracket zo \rrbracket$: $\lambda k_{\pi} . \lambda o . \cup k(o)$

Semantics of Dutch equatives

- ▶ In joint work Jianrong Yu and I argue that *zo* is a proform introducing kinds. (following Anderson & Morzycki 2015)
- ▶ $\llbracket zo \rrbracket$: $\lambda k_{\pi} . \lambda o . \cup k(o)$
- ▶ $\llbracket a/s \rrbracket$: $\lambda K_{\pi t} . \lambda K'_{\pi t} . \{k:K(k) = 1\} \subseteq \{k':K'(k') = 1\}$

Semantics of Dutch equatives

- ▶ In joint work Jianrong Yu and I argue that *zo* is a proform introducing kinds. (following Anderson & Morzycki 2015)
- ▶ $\llbracket zo \rrbracket$: $\lambda k_{\pi} . \lambda o . \cup k(o)$
- ▶ $\llbracket a/s \rrbracket$: $\lambda K_{\pi t} . \lambda K'_{\pi t} . \{k:K(k) = 1\} \subseteq \{k':K'(k') = 1\}$
- ▶ In other words:
 - ▶ *zo* takes a state/event as its argument and have it instantiate a kind.

Semantics of Dutch equatives

- ▶ In joint work Jianrong Yu and I argue that *zo* is a proform introducing kinds. (following Anderson & Morzycki 2015)
- ▶ $\llbracket zo \rrbracket$: $\lambda k_{\pi} . \lambda o . \cup k(o)$
- ▶ $\llbracket als \rrbracket$: $\lambda K_{\pi t} . \lambda K'_{\pi t} . \{k : K(k) = 1\} \subseteq \{k' : K'(k') = 1\}$
- ▶ In other words:
 - ▶ *zo* takes a state/event as its argument and have it instantiate a kind.
 - ▶ *als* takes two sets of kinds as arguments and posits a subset relation between them.

Semantics of Dutch equatives

- ▶ In joint work Jianrong Yu and I argue that *zo* is a proform introducing kinds. (following Anderson & Morzycki 2015)
- ▶ $\llbracket zo \rrbracket$: $\lambda k_{\pi} . \lambda o . \cup k(o)$
- ▶ $\llbracket als \rrbracket$: $\lambda K_{\pi t} . \lambda K'_{\pi t} . \{k : K(k) = 1\} \subseteq \{k' : K'(k') = 1\}$
- ▶ In other words:
 - ▶ *zo* takes a state/event as its argument and have it instantiate a kind.
 - ▶ *als* takes two sets of kinds as arguments and posits a subset relation between them.
- ▶ The distinguishing properties of states are degrees.

Semantics of Dutch equatives

- ▶ In joint work Jianrong Yu and I argue that *zo* is a proform introducing kinds. (following Anderson & Morzycki 2015)
- ▶ $\llbracket zo \rrbracket: \lambda k_{\pi} . \lambda o . \cup k(o)$
- ▶ $\llbracket als \rrbracket: \lambda K_{\pi t} . \lambda K'_{\pi t} . \{k:K(k) = 1\} \subseteq \{k':K'(k') = 1\}$
- ▶ In other words:
 - ▶ *zo* takes a state/event as its argument and have it instantiate a kind.
 - ▶ *als* takes two sets of kinds as arguments and posits a subset relation between them.
- ▶ The distinguishing properties of states are degrees.
- ▶ The distinguishing properties of events are manners (Landman & Morzycki 2003).

Semantics of Dutch equatives

- ▶ In joint work Jianrong Yu and I argue that *zo* is a proform introducing kinds. (following Anderson & Morzycki 2015)
- ▶ $\llbracket zo \rrbracket$: $\lambda k_{\pi} . \lambda o . \cup k(o)$
- ▶ $\llbracket als \rrbracket$: $\lambda K_{\pi t} . \lambda K'_{\pi t} . \{k : K(k) = 1\} \subseteq \{k' : K'(k') = 1\}$
- ▶ In other words:
 - ▶ *zo* takes a state/event as its argument and have it instantiate a kind.
 - ▶ *als* takes two sets of kinds as arguments and posits a subset relation between them.
- ▶ The distinguishing properties of states are degrees.
- ▶ The distinguishing properties of events are manners (Landman & Morzycki 2003).
- ▶ There is thus a unified semantic account for adjectival and verbal equatives.

Semantics of Dutch equatives

- ▶ In joint work Jianrong Yu and I argue that *zo* is a proform introducing kinds. (following Anderson & Morzycki 2015)
- ▶ $\llbracket zo \rrbracket$: $\lambda k_{\pi} . \lambda o . \cup k(o)$
- ▶ $\llbracket als \rrbracket$: $\lambda K_{\pi t} . \lambda K'_{\pi t} . \{k : K(k) = 1\} \subseteq \{k' : K'(k') = 1\}$
- ▶ In other words:
 - ▶ *zo* takes a state/event as its argument and have it instantiate a kind.
 - ▶ *als* takes two sets of kinds as arguments and posits a subset relation between them.
- ▶ The distinguishing properties of states are degrees.
- ▶ The distinguishing properties of events are manners (Landman & Morzycki 2003).
- ▶ There is thus a unified semantic account for adjectival and verbal equatives.
- ▶ There is a unified semantic account for *zo...als* and *zoals*.

Outline

1. Introduction
2. Data
3. Syntax and semantics of Dutch equatives
 - 3.1 Syntax of Dutch equatives
 - 3.2 Semantics of Dutch equatives
4. Same structure for *zoals* and *zo...als*
5. Same structure for verbal and adjectival equatives
6. Open Questions
 - 6.1 Postverbal *zoals*
 - 6.2 Fronting of *zo*
 - 6.3 Fronting of *als*-clause
7. Conclusions

- ▶ Dutch verbal equatives can be expressed by both *zo...als* and *zoals*.

- ▶ Dutch verbal equatives can be expressed by both *zo...als* and *zoals*.

(16) Jan heeft zo gedanst als Karen.
John has so danced as Karen
'John danced like Karen.'

- ▶ Dutch verbal equatives can be expressed by both *zo...als* and *zoals*.

(16) Jan heeft zo gedanst als Karen.
John has so danced as Karen
'John danced like Karen.'

(17) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John has danced like Karen.'

- ▶ Dutch verbal equatives can be expressed by both *zo...als* and *zoals*.

(16) Jan heeft zo gedanst als Karen.
John has so danced as Karen
'John danced like Karen.'

(17) Jan heeft zoals Karen gedanst.
John has so.as Karen danced
'John has danced like Karen.'

- ▶ They convey the exact same meaning, namely that John and Karen dance in the same manner.

Zoals and zo...als

Syntactic structure

Zoals and zo...als

Syntactic structure

- ▶ There is a type mismatch between *zo* and *als*: *zo* needs to combine with a kind variable, *als* needs to combine with a set of kinds.

Zoals and zo...als

Syntactic structure

- ▶ There is a type mismatch between *zo* and *als*: *zo* needs to combine with a kind variable, *als* needs to combine with a set of kinds.
- ▶ The *als*-clause undergoes quantifier raising to avoid the type mismatch.

Zoals and zo...als

LF structure

Zoals and zo...als

PF: low copy spellout (*zoals*)

Zoals and zo...als

PF: high copy spellout (zo...als)

Zoals and *zo...als*

- ▶ *Zoals* is thus not an atomic standard marker but the result of low spellout of the standard clause.

Zoals and *zo...als*

- ▶ *Zoals* is thus not an atomic standard marker but the result of low spellout of the standard clause.
- ▶ The movement of the *als*-clause is semantically motivated (both a problem and a blessing).

Outline

1. Introduction
2. Data
3. Syntax and semantics of Dutch equatives
 - 3.1 Syntax of Dutch equatives
 - 3.2 Semantics of Dutch equatives
4. Same structure for *zoals* and *zo...als*
5. Same structure for verbal and adjectival equatives
6. Open Questions
 - 6.1 Postverbal *zoals*
 - 6.2 Fronting of *zo*
 - 6.3 Fronting of *als*-clause
7. Conclusions

What about adjectival equatives?

- ▶ Dutch adjectival equatives cannot have *zoals*.

What about adjectival equatives?

- ▶ Dutch adjectival equatives cannot have *zoals*.

(18) *Jan is groot zoals Marie.
John is tall so.as Marie
'John is as tall as Mary.'

What about adjectival equatives?

- ▶ Dutch adjectival equatives cannot have *zoals*.

(18) *Jan is groot zoals Marie.
John is tall so.as Marie
'John is as tall as Mary.'

- ▶ This has also been observed by Corver (2018).

What about adjectival equatives?

- ▶ Dutch adjectival equatives cannot have *zoals*.

(18) *Jan is groot zoals Marie.
John is tall so.as Marie
'John is as tall as Mary.'

- ▶ This has also been observed by Corver (2018).
- ▶ But if *zoals* is merely a combination of *zo* and *als*, why is this not possible?

What about adjectival equatives?

- ▶ Dutch adjectival equatives cannot have *zoals*.

(18) *Jan is groot zoals Marie.
John is tall so.as Marie
'John is as tall as Mary.'

- ▶ This has also been observed by Corver (2018).
- ▶ But if *zoals* is merely a combination of *zo* and *als*, why is this not possible?
- ▶ I argue that the ungrammaticality of *zoals* in adjectival equatives is due to adjectival syntax (in contrast to verbal syntax).

What about adjectival equatives?

What about adjectival equatives?

- ▶ Type mismatch between *zo* and *als*-clause is resolved by QR.

What about adjectival equatives?

- ▶ Type mismatch between *zo* and *als*-clause is resolved by QR.
- ▶ The *als*-clause can only be spelled out in its QRed position.

What about adjectival equatives?

- ▶ Type mismatch between *zo* and *als*-clause is resolved by QR.
- ▶ The *als*-clause can only be spelled out in its QRed position.
- ▶ The *als*-clause cannot be spelled out low, because of a head-to-head adjacency effect.

What about adjectival equatives?

- ▶ Type mismatch between *zo* and *als*-clause is resolved by QR.
- ▶ The *als*-clause can only be spelled out in its QRed position.
- ▶ The *als*-clause cannot be spelled out low, because of a head-to-head adjacency effect.
- ▶ In case of left adjunction to a head-initial projection, the two heads should be adjacent. (Van Riemsdijk 1998)

What about adjectival equatives?

- ▶ Type mismatch between *zo* and *als*-clause is resolved by QR.
- ▶ The *als*-clause can only be spelled out in its QRed position.
- ▶ The *als*-clause cannot be spelled out low, because of a head-to-head adjacency effect.
- ▶ In case of left adjunction to a head-initial projection, the two heads should be adjacent. (Van Riemsdijk 1998)
- ▶ Cf. Head Final Filter

What about adjectival equatives?

- ▶ Similar facts have been observed for comparatives.

What about adjectival equatives?

- ▶ Similar facts have been observed for comparatives.

(19) More intelligent than Bill.

vs.

(20) *more than Bill intelligent.

What about adjectival equatives?

- ▶ Similar facts have been observed for comparatives.

(19) More intelligent than Bill.

vs.

(20) *more than Bill intelligent.

- ▶ Grosu & Horvath (2006) have analysed this in terms of a head-to-head adjacency effect.

Outline

7. Conclusions

- (21) Ik heb gedanst zoals Gert.
I have danced so.as Gert
'I have danced like Gert.'

- (21) Ik heb gedanst zoals Gert.
I have danced so.as Gert
'I have danced like Gert.'

- ▶ Note that *zo* cannot occupy this postverbal position in the absence of an *a/s*-clause

(21) Ik heb gedanst zoals Gert.
I have danced so.as Gert
'I have danced like Gert.'

- ▶ Note that *zo* cannot occupy this postverbal position in the absence of an *a/s*-clause

(22) Ik heb <zo> gedanst <*zo>.
I have so danced so
'I have danced like that.'

(21) Ik heb gedanst zoals Gert.
I have danced so.as Gert
'I have danced like Gert.'

- ▶ Note that *zo* cannot occupy this postverbal position in the absence of an *a/s*-clause

(22) Ik heb <zo> gedanst <*zo>.
I have so danced so
'I have danced like that.'

- ▶ My analysis thus far cannot account for postverbal *zoals*.

Postverbal *zoals*

Outline

1. Introduction
2. Data
3. Syntax and semantics of Dutch equatives
 - 3.1 Syntax of Dutch equatives
 - 3.2 Semantics of Dutch equatives
4. Same structure for *zoals* and *zo...als*
5. Same structure for verbal and adjectival equatives
6. Open Questions
 - 6.1 Postverbal *zoals*
 - 6.2 Fronting of *zo*
 - 6.3 Fronting of *als*-clause
7. Conclusions

Fronting of *zo*

- ▶ *Zo* cannot be fronted without the *als*-clause.

Fronting of *zo*

- ▶ *Zo* cannot be fronted without the *als*-clause.

(23) **Zo heb ik nooit gedanst als Marie.*
so have I never danced as Marie
'I have never danced like Mary.'

Fronting of *zo*

- ▶ *Zo* cannot be fronted without the *als*-clause.

(23) **Zo heb ik nooit gedanst als Marie.*
so have I never danced as Marie
'I have never danced like Mary.'

vs.

(24) *Zoals Marie heb ik nooit gedanst.*
so.as Mary have I never danced
'I have never danced like Mary.'

Fronting of *zo*

- ▶ *Zo* cannot be fronted without the *als*-clause.

(23) **Zo heb ik nooit gedanst als Marie.*
so have I never danced as Marie
'I have never danced like Mary.'

vs.

(24) *Zoals Marie heb ik nooit gedanst.*
so.as Mary have I never danced
'I have never danced like Mary.'

(25) **Zo groot ben ik nooit geweest als Marie.*
so tall am I never been as Mary
'I have never been as tall as Mary.'

Fronting of *zo*

- ▶ *Zo* cannot be fronted without the *als*-clause.

(23) **Zo heb ik nooit gedanst als Marie.*
so have I never danced as Marie
'I have never danced like Mary.'

vs.

(24) *Zoals Marie heb ik nooit gedanst.*
so.as Mary have I never danced
'I have never danced like Mary.'

(25) **Zo groot ben ik nooit geweest als Marie.*
so tall am I never been as Mary
'I have never been as tall as Mary.'

vs.

(26) *Zo groot als Marie ben ik nooit geweest.*
so tall as Mary am I never been
'I have never been as tall as Mary.'

7. Conclusions

Conclusions

- ▶ Dutch does not follow H & B's (1998) tendency.

Conclusions

- ▶ Dutch does not follow H & B's (1998) tendency.
- ▶ *Zoals* can be decomposed into *zo* and *als*.

Conclusions

- ▶ Dutch does not follow H & B's (1998) tendency.
- ▶ *Zoals* can be decomposed into *zo* and *als*.
- ▶ *zoals* is low copy spellout, whereas *zo...als* is high copy spellout.

Conclusions

- ▶ Dutch does not follow H & B's (1998) tendency.
- ▶ *Zoals* can be decomposed into *zo* and *als*.
- ▶ *zoals* is low copy spellout, whereas *zo...als* is high copy spellout.
- ▶ Adjectival and verbal equatives have the same underlying syntax and semantics.

Conclusions

- ▶ Dutch does not follow H & B's (1998) tendency.
- ▶ *Zoals* can be decomposed into *zo* and *als*.
- ▶ *zoals* is low copy spellout, whereas *zo...als* is high copy spellout.
- ▶ Adjectival and verbal equatives have the same underlying syntax and semantics.
- ▶ *Zoals* is ruled out in adjectival adjectives because of a head-to-head adjacency effect.
