Conclusion

Introduction

- ▶ Many suffixes trigger palatalisation of elements to their left

Introduction

- ▶ Many suffixes trigger palatalisation of elements to their left
- ▶ The suffixes differ in the types of palatalisation they trigger

Introduction

- ▶ Many suffixes trigger palatalisation of elements to their left
- ▶ The suffixes differ in the types of palatalisation they trigger
- ▶ Scheer (2001) distinguishes two types of palatalisation:

Introduction

- ▶ Many suffixes trigger palatalisation of elements to their left
- ▶ The suffixes differ in the types of palatalisation they trigger
- ▶ Scheer (2001) distinguishes two types of palatalisation:
 - ▶ 'small', e.g. /k/ → /tʃ/ (*vojá***k** 'soldier' → *vojá***c**-i 'soldiers')

Introduction

- ▶ Many suffixes trigger palatalisation of elements to their left
- ▶ The suffixes differ in the types of palatalisation they trigger
- ▶ Scheer (2001) distinguishes two types of palatalisation:
 - ▶ 'small', e.g. /k/ → /tʃ/ (*voják* 'soldier' → *vojác-i* 'soldiers')
 - ▶ 'big', e.g. /k/ → /tʃ/ (*plak-at* 'to cry' → *pláč-u* 'I cry')

Two types of palatalisation (Scheer 2001)

	small	LOC/DAT.F.SG -ě	big	PST.PASS.PTCPL -ěn
/k/	/ʦ/	<i>louka-louce</i> 'meadow'	/tʃ/	<i>zatknout-zatčen</i> 'arrested'
/h/	/z/	<i>kniha-knize</i> 'book'	/z/	<i>táhnout-tažen</i> 'pulled'
/g/	/z/	<i>liga-lize</i> 'league'	?	(<i>Olga-Olžin</i>)
/x/	/ʃ/	<i>střecha-střeše</i> 'roof'	/ʃ/	<i>nadchnout-nadšen</i> 'excited'
/t/	/c/	<i>máta-mátě</i> 'mint'	/ʦ/	<i>nutit-nucen</i> 'forced'
/d/	/ʃ/	<i>vláda-vládě</i> 'government'	/z/	<i>uklidit-uklizen</i> 'cleaned up'
/ʦ/	/ʦ/	(<i>Bystrica - Bystrice</i> 'Bystrica')	/tʃ/	<i>péci-pečen</i> 'baked'
/s/	/s/	<i>mísa-míse</i> 'bowl'	/ʃ/	<i>hlásit-hlášen</i> 'reported'
/z/	/z/	<i>koza-koze</i> 'goat'	/z/	<i>ohrozit-ohrozen</i> 'endangered'

Overview

Prerequisites

Velars

Coronals

Conclusion

Prerequisites

- ▶ Strict CV (?Scheer 2004)
- ▶ Element Theory (?) ?2012

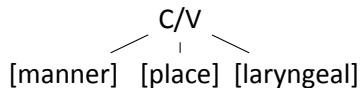

Prerequisites

a. General schema

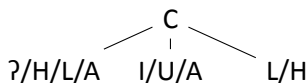

Prerequisites

a. General schema

b. Consonants

c. Vowels

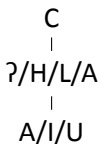

- ▶ [manner] and [place] can be complex → 2/3 elements
 - ▶ E.g. /tʃ/ = ʔ.H.I, and /e/ = A.I

Prerequisites

- ▶ For ease of exposition
 - ▶ we verticalise the geometry
 - ▶ we ignore the [laryngeal] node

a. Consonants

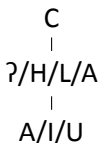

b. Vowels

Prerequisites

- ▶ For ease of exposition
 - ▶ we verticalise the geometry
 - ▶ we ignore the [laryngeal] node

a. Consonants

b. Vowels

- ▶ The **palatalizers** are floating structures: no C/V node
- ▶ They strive for association to an available C/V node
- ▶ Association starts from the leftmost available C/V node

Outline

Introduction

Patterns of palatalisation

The analysis

Conclusion

Conclusion

	small	medium	big
/k/	/t͡s/	/t͡ʃ/	/t͡ʃ/
/x/	/ʃ/	/ʃ/	/ʃ/
/t/	/c/	/c/	/t͡s/
/t͡s/	/t͡s/	?	/t͡ʃ/
/s/	/s/	/s/	/ʃ/
/n/	/ɲ/	/ɲ/	/ɲ/
/r/	/r̄/	/r̄/	/r̄/

Conclusion

	small	medium	big
?	? <u>I</u>	? <u>H.I</u>	? <u>H.I</u>
H	H <u>I</u>	<u>H.I</u>	<u>H.I</u>
?A	? <u>A.I</u>	? <u>H.A.I</u>	? <u>H.A.I</u>
?I	? <u>I</u>	? <u>H.I</u>	?
H.A	H <u>A.I</u>	<u>H.A.I</u>	<u>H.A.I</u>
L	L <u>I</u>	L <u>H.I</u>	L <u>H.I</u>
A	A <u>I</u>	A <u>H.I</u>	A <u>H.I</u>

Conclusion

- ▶ Abstract segmental representations
 - ▶ Similar-sounding segments with different representations
- ▶ Substance-free phonology
 - ▶ Focus on phonological behaviour rather than on phonetics
- ▶ Strict modularity
 - ▶ Phonology and phonetics as two different modules

Outline

Labials

Comparative -š: assimilation

Adjectivising -í (God and animals)

Overview of patterns

Labials

- ▶ When followed by some palatalizers, labials ‘develop a fully developed palatal element [j]’, i.e. [bj], [pj], [vj] (Short 1993, 459)
- ▶ ‘after bilabial /m/ nasal resonance extends over both segments’, i.e. [mj] (Short 1993, 459)

Labials

- ▶ When followed by some palatalizers, labials ‘develop a fully developed palatal element [j]’, i.e. [bj], [pj], [vj] (Short 1993, 459)
- ▶ ‘after bilabial /m/ nasal resonance extends over both segments’, i.e. [mj] (Short 1993, 459)
- ▶ The surfacing of [j] is not related to palatalization ‘size’, but rather to the CV profile of the relevant suffix
 - ▶ ‘Small’ -e.LOC/DAT.F.SG and ‘medium’ -ej.CMPR display [j]
 - ▶ ‘Big’ -en.P.PRT doesn’t
- ▶ Some (small) palatalizing *e* pattern with long vowels
 - ▶ nes-l ~ nés-t ... ⇒ P.PRT CVC-l ~ INF CVVC-t
 - ▶ spě-l ~ spě-t ... ⇒ P.PRT CěC-l ~ INF CěC-t ⇒ ě = VV
- ▶ These *e* can govern a preceding alternation site
 - ▶ N.SG barv-a, G.PL barev, LOC.SG barv-ě [rvje]

Labials

- ▶ Labials have an U element
- ▶ U and I are on the same tier
- ▶ Floating I cannot associate to a node containing U
- ▶ I has two choices:
 - ▶ it can associate with the final V of the root, if available, and surface as [j] (thus, $je = VV$)
 - ▶ if no such V is available, I remains unassociated, and therefore unpronounced

Labials: /p/ → /pj/

▶ -ě.LOC/DAT.F.SG

C V
|
e

|

Labials: /p/ → /pj/

- ▶ -ě.LOC/DAT.F.SG

C V
|
e

I

- ▶ I tries to associate to the leftmost available slot, but
- ▶ U prevents I associating to the stem-final C

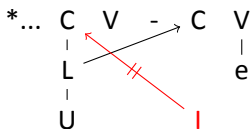

*... C V - C V
| |
? |
| e
U I

- ▶ I associates to the second left-most slot, i.e. the stem-final V
- ▶ ...p-ě → [pje]

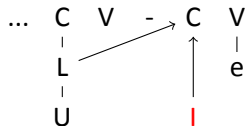

... C V - C V
| |
? |
| e
U I

Labials: /m/ → [mɲ]

- ▶ | tries to associate to the leftmost available slot, but
- ▶ U prevents | associating to the stem-final C
- ▶ L association with the suffix's C prevents | associating to V

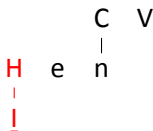

- ▶ | associates to the second leftmost slot, i.e. the suffix-initial C
- ▶ ...m-ě → [mɲe]

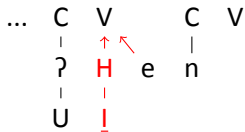

Labials: /p/ → /p/

- ▶ -en.P.PRT

- ▶ U prevents H.I associating to root-final C
- ▶ H.I associates root-final V
- ▶ e joins H.I (e = A.I) ⇒ ...p-en → [pen]

Overview of patterns

Comparative -š: assimilation

base			zero	small	big
/k/	<i>leh</i> ký	'light'	/k/	/t͡s/	/t͡ʃ/ <i>lehč</i> (š)í
/h/	<i>dra</i> hý	'expensive'	/h/	/z/	/z/ <i>draž</i> ší
/g/	—		/g/	/z/	?
/x/	<i>tich</i> ý	'silent'	/x/	/ʃ/	/ʃ/ <i>tiš</i> ší
/t/	<i>boh</i> atý	'rich'	/t/	/c/	/t͡s/
/d/	<i>tvrd</i> ý	'hard'	/d/	/t͡ʃ/	/z/
/t͡s/			/t͡s/	/t͡s/	/t͡ʃ/
/s/	<i>vyso</i> ký	'high'	/s/	/s/	/ʃ/ <i>vyš</i> ší
/z/	<i>nízk</i> ý	'low'	/z/	/z/	/z/ <i>niž</i> ší
/n/			/n/	/ɲ/	/ɲ/
/r/	<i>star</i> ý	'old'	/r/	/r̩/	/r̩/
/p/	(<i>dobr</i> ý)	'good'	/p/	/pj/	/p/
/b/	<i>slab</i> ý	'weak'	/b/	/bj/	/b/
/f/			/f/	/fj/	/f/
/v/	<i>tmav</i> ý	'dark'	/v/	/vj/	/v/
/m/			/m/	/mj/	/m/

Comparative -š: assimilation

- ▶ drahý-dražší, tichý-tiší, but also vysoký-vyšší, blízký-blíží, úzký-uží, nízký-níží, krásný-kraší
- ▶ /ʃ/ palatalizes both velar and coronal consonants, as long as they are fricative, but labials are still out
 - ▶ U repels ʃ
 - ▶ Strong typological evidence for the resistance of labials to palatalize
- ▶ OCP effect

Comparative -š: assimilation

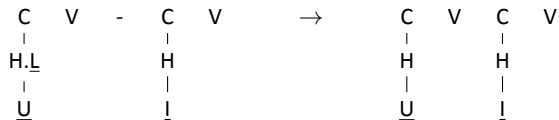

- ▶ Velar - /x-ʃ/ → [ʃ]

- ▶ Coronal - /s-ʃ/ → [ʃ] (I+I=I)

- ▶ Labial - /v-ʃ/ → [ʃ] (U ↔ I; /v/-devoicing → L-removal)

Comparative -š: assimilation

- ▶ **PAL₃** as fricative assimilation
 - ▶ OCP effect
 - ▶ Labials out because labial's U repels l
- ▶ Where does the difference between feature integration and assimilation come from?
- ▶ What drives the application of the two different processes?
- ▶ Tentative answer
 - ▶ **PAL₁** l is 'manner-less' → it links to whatever 'manner' feature it finds, or to an empty C if repelled by U
 - ▶ **PAL₃** l is bound to its 'manner' feature, and it follows its fate, unless repelled by U
